REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

I have the honour to submit to your Excellency the Forty-second Annual Report on Marriages, Births, and Deaths in Ireland.

GENERAL SUMMARY.

In the course of the year 1905 the Marriages registered in Ireland numbered 23,078 ; the Births, 102,832 ; and the Deaths, 75,071. The marriage-rate which is 5·26 per 1,000 of the estimated population shows an increase of 0·04 as compared with that for the year 1904, and is 0·20 above the average rate for the ten years 1895-1904, and the highest rate for any of these years ; the birth-rate (23·4 per 1,000) shows a decrease of 0·2 as compared with that for the preceding year, but is 0·2 above the average rate for the ten years 1895-1904 ; and the death rate (17·1 per 1,000) is 1·0 under the rate for the preceding year, and 0·9 under the average rate for the ten years 1895-1904.

It appears from the returns that the natural increase of population, or excess of births over deaths, was 27,761 ; the loss by emigration amounted to 30,676 ; a decrease of 2,915 in the population would thus appear to have taken place during the year, but against this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,391,565.

Table I.—Showing for each of the years 1895-1905 the estimated **Population**; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby ; and the averages for the ten years 1895-1904.

Years	* *Estimated* Population in the middle of each year	Numbers *Registered*			Number of Emigrants as returned by the Enumerators	Rate per 1,000 of Estimated Population			
		Marriages	Births	Deaths		Marriages	Births	Deaths	Emigrants

Offences against the Acts administered by this Department reported during the financial year ended 31st March last, numbered 554. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 21 cases. In 11 of these the parties were convicted and punished; and in 9 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law, while one case was pending at the end of the year.

Amongst the offences dealt with the following are included:—Neglect to Register Births; neglect to Register Deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; failure of Registrar to deliver certified copies of entries to Superintendent Registrar.

A sum of £120 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £66 15s. 8d., of which sum £30 17s. 6d. was paid for local professional assistance, and £2 14s. 9d. for mileage to the Registrars.

MARRIAGES.

During the year the number of Marriages registered was 23,078, being equal to 5·26 per 1,000 of the estimated population,* a rate which is 0·04 above that for the previous year, 0·20 above the average for the ten years 1895-1904, and higher than the rate for any of these years.

Of the 23,078 Marriages registered during last year, 16,128 were between Roman Catholics; 3,678 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,361 were in Presbyterian Meeting-houses; 509 in "Registered Buildings" belonging to various religious denominations; only 387 by civil contract in the Registrars' offices; 5 were according to the usages of the Society of Friends; and 10 according to the Jewish rites.

The rate represented by the number of Roman Catholic Marriages is 4·95 per 1,000 of the estimated number of Roman Catholics, being 0·26 over the corresponding average rate for the preceding ten years, and higher than the Roman Catholic Marriage rate for any of these years, except that for 1904, which it equalled; and the other Marriages represent a rate of 6·14 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·05 over the corresponding average rate.

Of the 3,678 Marriages according to the rites of the Church of Ireland, 45 were by special licence, 3,100 by licence, 511 after the publication of banns, 4 on Registrar's certificate, and in 18 instances there was no information afforded as to which of these methods was adopted.

---

* The rates for the total of Ireland and for the county boroughs of Dublin and Belfast and for Londonderry county and county borough are based on the estimated population in the middle of the respective years, those for the provinces for the years 1900-1905, and for the remaining counties for the year 1905 on the population according to the Census of 1901, and those for the provinces for the years 1896-1899 on the population according to the Census of 1891. The provinces and counties adopted for 1899-1905 are the areas as constituted after alterations made under the Local Government (Ireland) Act, 1898.

4. United Presbytery or Synod of Munster	2	2	2
5. Presbytery of Ireland (United Free Church of Scotland)	6	9	20
Total	174	636	2,372

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized without special licence. From this it appears that, on the 31st December, 1905, there were 1,489 churches and chapels of the Church of Ireland, 636 registered Presbyterian Meeting-houses, and 410 "Registered Buildings" belonging to various religious denominations. These numbers show a decrease of 2 as regards the Church of Ireland, an increase of 1 in the number of Presbyterian Meeting-houses, and an increase of 7 in the total number of "Registered Buildings" as compared with the previous year.

The number of "Registered Buildings" belonging to the several religious bodies is shown in the following list, revised for the year, 1905.

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, . . .	253	Methodists, New Connexion,	5	Non-Subscribing Christians,	1
Reformed Presbyterians, .	40	"The Catholic Apostolic Church," . . .	2	"Undenominational," .	1
Independents, or Congregationalists, . . .	29	Non-Subscribing Unitarians,	2	Jews, ...	1
Baptists, ...	27	Unitarians, . . .	1		
Christian Brethren, . .	18	Covenanters . . .	1		
Moravians, or United Brethren,	9	Welsh Presbyterians, . .	1		
Salvation Army, . .	9	United Original Seceders, .	1		
Seceders, ...	8	"Protestant Dissenters," .	1	Total, . . .	410

Of the 23,078 marriages registered during the year 1905, there were recorded—in the first quarter 7,535; in the second, 4,947; in the third, 5,266; and in the last, 5,330.

An examination of the Abstracts shows that of the total marriages 88·3 per cent. were those of bachelors with spinsters; 7·4 per cent. those of widowers and spinsters; 2·6 per cent. of bachelors and widows; and 1·7 per cent. were those of widowers and widows. Thus of the men married 9·1 per cent. were widowers, and 4·3 per cent. of the women were widows; and in 12 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1895-1905, and the average number for the ten years 1895-1904, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

Equivalent annual rate per 1,000 living:—															
Average, 1895-1904,	6·7	4·2	4·0	4·0	4·7	4·9	6·0	6·7	6·6	6·1	6·3	4·7	4·7	4·6	5·1
1905,	7·6	3·9	4·0	4·3	4·9	4·8	6·2	7·0	6·5	6·1	6·9	4·5	4·8	4·9	5·3

I regret to report that in the great majority of instances the ages of the persons married are not stated, as a complete record of the ages of the persons married would be valuable. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1905 the ages of both parties were specified in 3,174 cases only, being less than one-seventh of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 23,078 men married during the year, 321, or 1·39 per cent., were minors; and of the women married 1,368, or 5·93 per cent., were under age.

Of those married under age in 1905 the highest proportion of husbands (1·80 per cent.) and of wives (7·39 per cent.) was in the province of Ulster.

It is observable that the per-centage of persons married in Ireland, who were under age, is very far below the corresponding per-centages in England and Scotland.

A crude test of the progress of elementary education is afforded by the signatures of the contracting persons, as seen in the marriage registers or certificates. In the year 1905, 20,774, or 90·0 per cent., of the husbands, and 21,328, or 92·4 per cent., of the wives, wrote their names, and the remainder signed by marks.

These figures show a considerable improvement, when compared with the corresponding results in the first of the preceding ten years, the per-centage of persons married in 1895 who wrote their names, being—men 83·0, and women 84·3; and they exhibit a great advance when compared with the per-centage for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

For men the per-centages range for the several provinces last year from 87 in Connaught to 92 in Munster; and, for women, from 91 in Ulster to 94 in Munster and Leinster.

In 707 cases both of the persons married signed the register by "mark," and in 2,640 the register was thus signed by either the husband or the wife, so that in 3,347 cases, or 14·5 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 19,731 or 85·5 per cent., *both* parties wrote their names.

In the following table the proportion per cent. of persons married in each of the eleven years 1895-1905, who wrote their names in the registers or certificates; of minors; of widowers; and of widows; is given for Ireland, and for each of the four provinces.

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1895—1905, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-marriages.**

	1905,	86·6	91·7	0·19	3·90	8·61	2·92

The marriages registered in proportion to population at all ages, were most numerous in the province of Ulster, in which, however, the rate was only 5·7 per 1,000 of the population, according to the Census of 1901; Leinster comes next with 5·5 per 1,000; Munster third, with 4·7 per 1,000; and Connaught last, the rate being 4·1 per 1,000.

The highest county, or county borough, marriage rate (7·9 per 1,000 of the population) was in the county borough of Belfast; and the lowest 3·7 in Clare county. Between these the most favourable rates were 7·5 for the county borough of Dublin, 5·5 for each of the counties of Antrim and Dublin, and 5·3 for Armagh county, and the least so 3·9 each for Queen's county, the county of Galway, and the county of Mayo.

BIRTHS.

The births registered during the year 1905 numbered 102,832—52,509 boys and 50,323 girls, or 104·3 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 42·7, or 23·4 per thousand, which is 0·2 above the average rate per 1,000 for the ten years, 1895-1904.

Of the 102,832 children whose births were registered in Ireland during the year 1905, 100,122, or 97·4 per cent. were legitimate, and 2,710, or 2·6 per cent. were illegitimate, being equal to the corresponding average per-centages for the preceding 10 years. These results compare favourably with the returns for most other countries.

The number of male children born in wedlock during the year was 51,078 and of female, 49,044, being 104·1 of the former to every 100 of the latter; of the illegitimate children 1,431 were males, and 1,279 females, or 111·9 boys to 100 girls.

The per-centage of children born in Ulster who were illegitimate, was 3·5; in Leinster, 2·7; in Munster, 2·3; and in Connaught 0·7, as appears from Table VII.

TABLE VII.—The Per-centage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1901-1905 by Provinces.

Provinces	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.

ULSTER . .	96·6	96·6	96·7	96·6	96·5	3·4	3·4	3·3	3·4	3·5
CONNAUGHT .	99·3	99·3	99·5	99·3	99·3	0·7	0·7	0·5	0·7	0·7

The total birth-rates for the respective provinces in 1905 were—for Leinster, 23·6 per 1,000 of the population in 1901; Munster, 21·9; Ulster, 24·4; and for Connaught, 20·9.

The four highest birth-rates were in Dublin county borough, 32·6; Belfast county borough, 31·8; county Kildare, 24·0; and county Antrim, 23·9. The lowest rates were county Roscommon, 18·3; county Leitrim, 18·5; county Longford, 18·9; and county Cavan, 19·0.

Of the total births, 51·1 per cent. were registered in the first six months of the year (181 days), and 48·9 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 25,726; in the second, 26,843; in the third, 25,912; and in the fourth, 24,351.

DEATHS.

The deaths (75,071) registered during the year, are equal to 1 in 58, or 17·1 per 1,000 of the estimated population. The deaths of males amounted to 37,278, and those of females to 37,793, the rate per 1,000 males and 1,000 females, respectively, being 17·1.

The death-rate (17·1) is 1·0 below that for the year 1904, and 0·9 under the average rate for the preceding ten years.

I am indebted to many of the Registrars for valuable notes on the sanitary condition of their respective districts furnished by them with their Quarterly Reports. These notes were published in the Quarterly Returns issued from this Department, and it is to be hoped that they received the serious attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

The recorded death-rates for the four provinces show that for Connaught to be 13·7; for Munster 15·8; for Ulster, 17·8; and for Leinster, 18·3 per 1,000 of their respective populations in 1901.

The following five county, or county borough areas have the lowest registered mortality :—county Kerry, 12·9; county Mayo, 13·2; county Roscommon, 13·2; county Leitrim, 13·5; and county Cavan, 13·8.

Those having the highest rate are—Dublin county borough, 23·1; Belfast county borough, 20·4; county Armagh, 19·3; county Wexford, 18·5; and county Tyrone, 17·7.

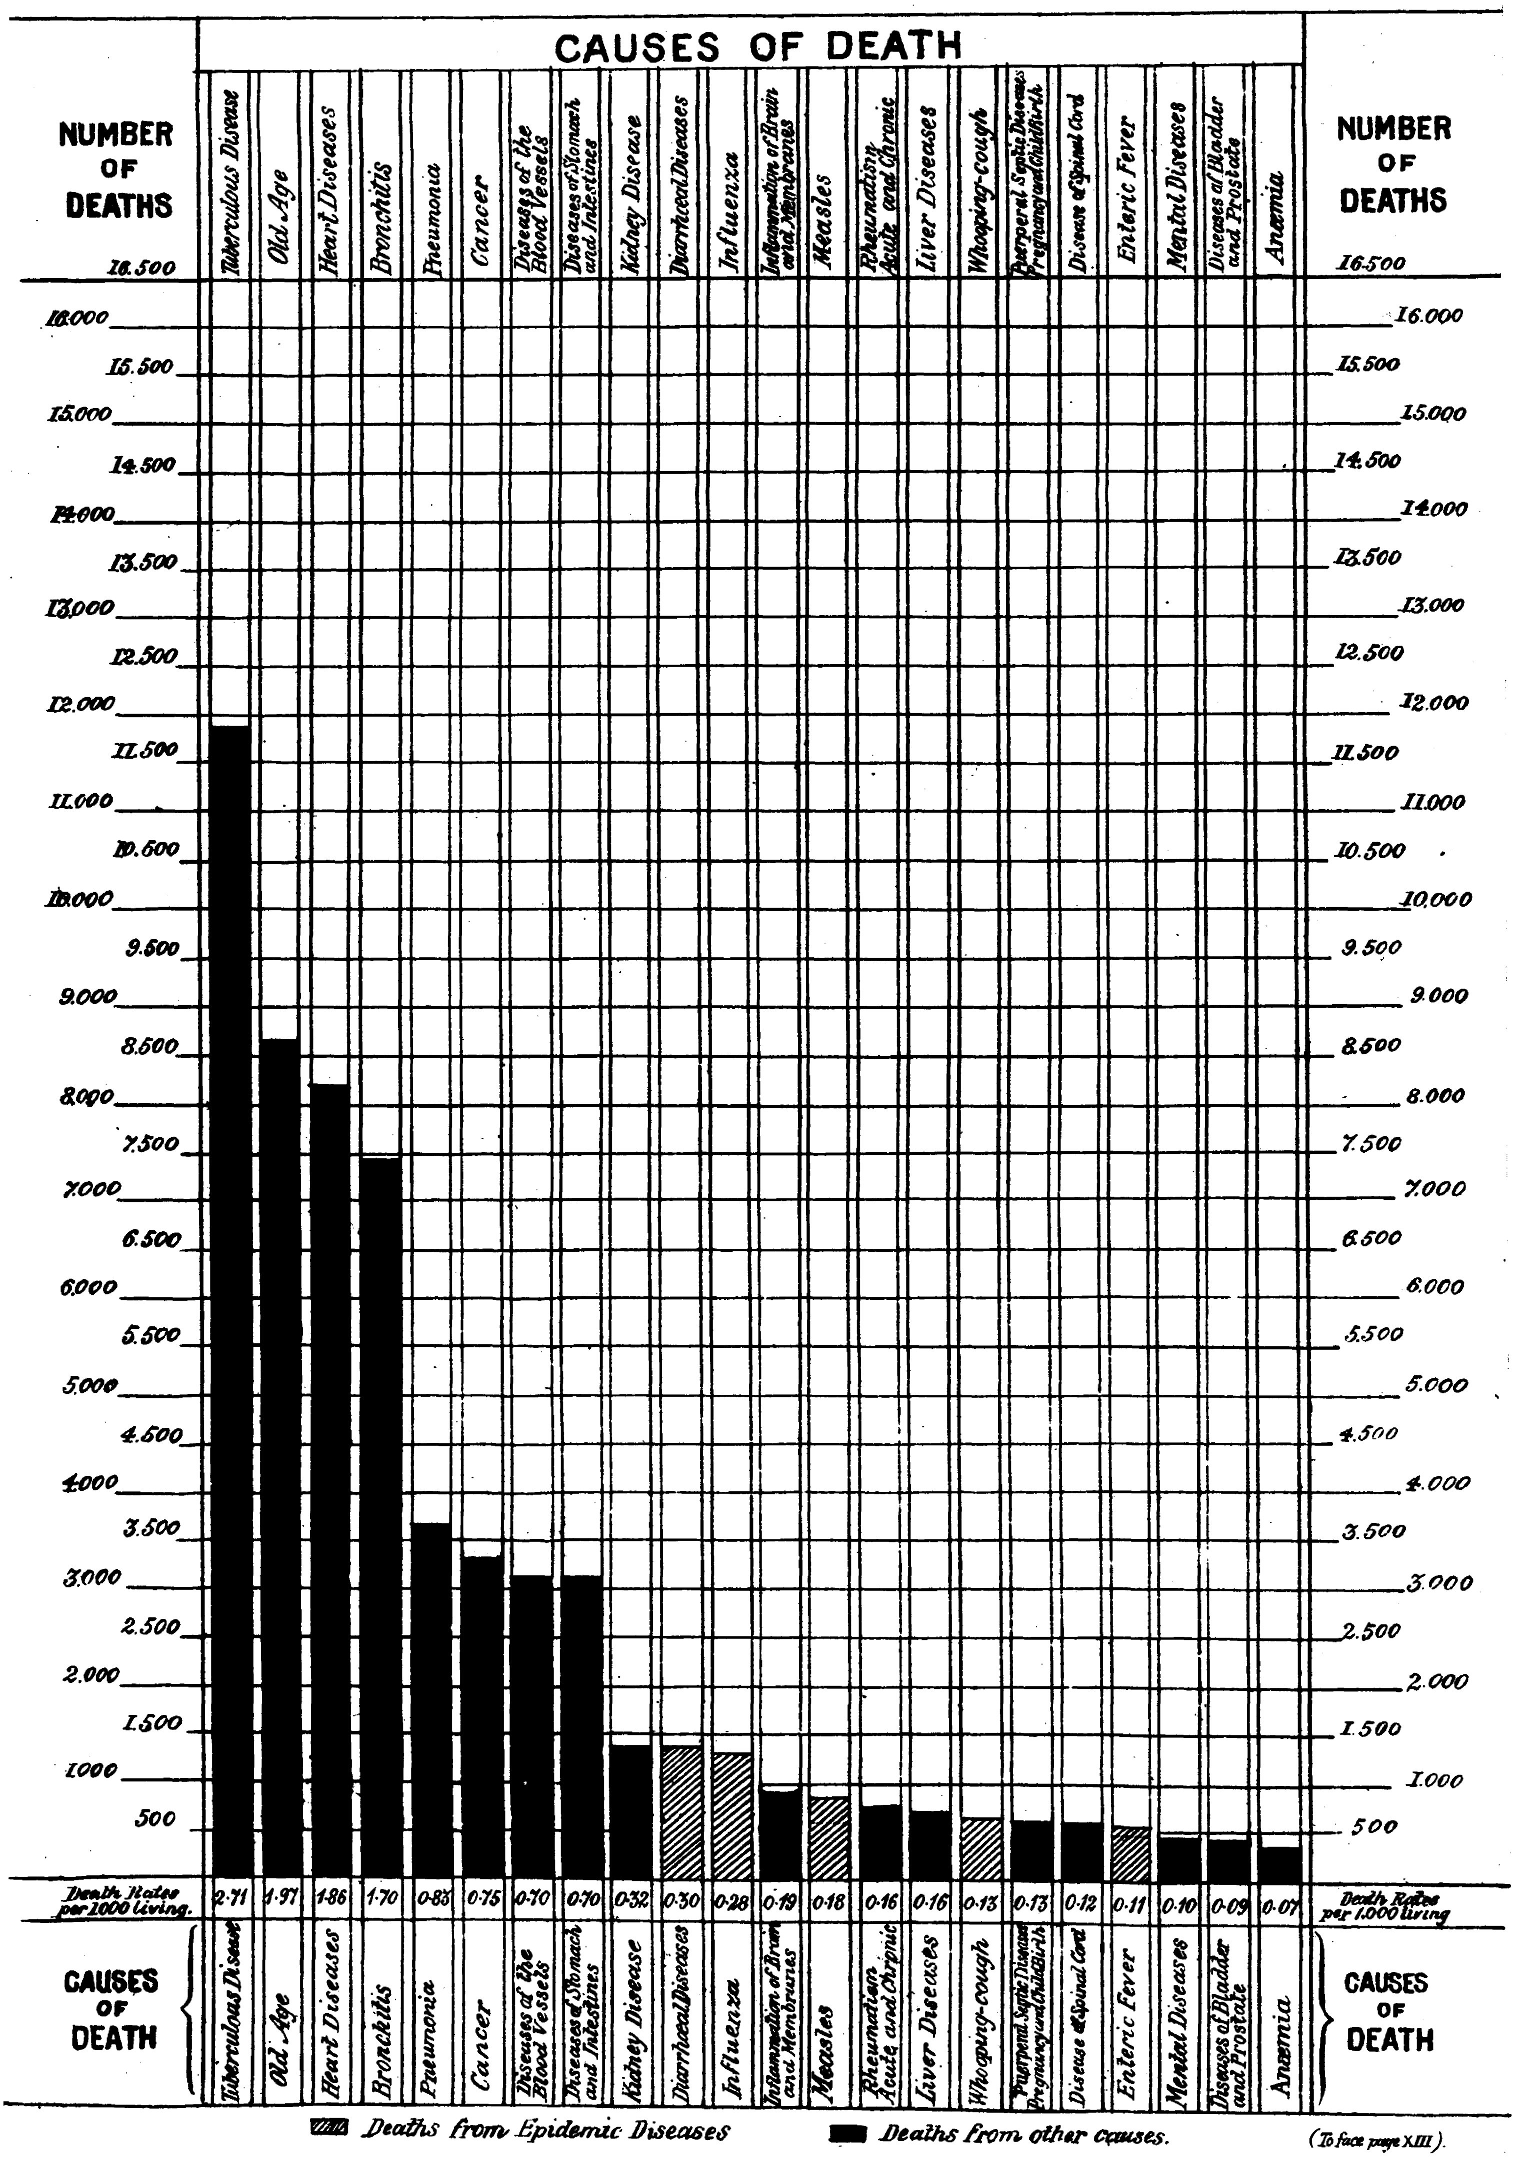
The deaths registered in the first half of the year generally outnumber those in the second. Of the total deaths in 1905, 55·2 per cent. were registered in the six months, January to June inclusive; and 44·8 per cent. in the remaining six months of the year.

The deaths registered in each quarter are represented by the following annual rates:—First quarter, 19·9 per 1,000 of the population; second, 17·9; third, 14·5; and fourth, 16·1. The rate for the first quarter is 1·8 below, the second 1·0 below, the third 0·4 below, and the fourth 0·5 below the corresponding average rates for the respective quarters in the ten years 1895-1904.

It will be seen from the table on pp. 136–145, *that of the* 75,071 *deaths registered during the year,* 2,938 *took place in Infirmaries and General and Special Hospitals*; 1,485 *in Public Lunatic Asylums*; 10,371 *in Workhouses and Workhouse Hospitals*; *and* 60,277 *were of persons who died "At their Own Homes, &c."*

Of the total number of deaths, those in "Infirmaries and General and Special Hospitals" constitute 3·9 per cent., the per-centages for the four provinces varying from 0·6 in Connaught to 8·9 in Leinster. Nearly fourteen per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 16·2; Munster, 18·8; Ulster, 10·3; and Connaught, 9·8.

DIAGRAM No. 2.—Mortality from Twenty-two of the Principal Causes of Death, in Ireland, in the year 1905.



(To face page XIII).

TABLE VIII.—Showing, by QUARTERLY PERIODS, the number of BIRTHS and DEATHS registered in Ireland in each of the eleven years, 1895-1905, and the average number for the ten years, 1895-1904.

CAUSES OF DEATH.

The classification of the Causes of Death which appears in this Report is adopted from the official Nomenclature of Diseases, 1896, with a few modifications which have been approved of after conference with the President and Fellows of the Royal College of Physicians of Ireland and with the Registrars-General of England and Wales and of Scotland.

The relative mortality from twenty-two of the principal causes of death in Ireland in the year 1905 is shown in Diagram No. 2, facing this page. The highest numbers of deaths were from all forms of tuberculous disease, 11,882 ; from *old age*, 8,641 ; from heart diseases, 8,170 ; and from bronchitis, 7,462 ; represented by rates of 2·71, 1·97, 1·86, and 1·70 per 1,000 of the estimated population.

GENERAL DISEASES.

Small-pox.—During the year 1905, there were 5 deaths from small-pox registered in the whole of Ireland, 4 being of males and one of a female. In each of the 3 years preceding, the deaths from small-pox were 1, 40, and 16. The particulars regarding the 5 deaths in 1905 are as follows :—One occurred in the Purdysburn Small-pox Hospital, in the District of Ballylesson, of a man, admitted from Belfast, who was not vaccinated; two deaths occurred in the Millford Union Fever Hospital—both of these deaths being of males, who were stated to have been "probably vaccinated in infancy," but "that the marks were not distinguishable," and that "re-vaccination had not been performed"; one death occurred in Drogheda Union Fever Hospital, of a woman, regarding whom it was reported that there were "no marks of primary vaccination"; the 5th death occurred in the Fever Hospital of Navan Union; the deceased was a man, aged 27 years, who was reported to have been vaccinated in infancy; it was also stated that he had been in contact with a case of small-pox in Drogheda. As regards the seasonal registration of the deaths, one was registered in the March Quarter, two in the June Quarter, and two in the December Quarter of the year. The records point to three threatened outbreaks of small-pox, namely :—in Belfast, in Milford, and in Drogheda. Nothwithstanding this, the mortality from the disease is far below the average for the preceding ten years, which result is a matter of congratulation to the Sanitary Administration of the country.

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes, and from with the Average Annual Number for the ten years 1895-1904 ; and (2) the respective

NOTE.—In this Table the figures for the years 1902-5

*The rates for the years 1896-9 for the Provinces are based on the Census of 1891, those for the years 1900-1905 on the Census of 1901. See (*) Note on page vii

Measles.—Deaths from measles were equivalent to a rate of 0·18 per 1,000 of the population, estimated to the middle of 1905, and numbered 809 for the whole of Ireland. This total is over the average (712) for the ten years, 1895-1904. During these years the largest number of deaths (1,532) from measles occurred in 1899, and the lowest number (301) in the year 1895. In Table X., page xvi., it may be seen that the death rate from measles in the province of Leinster was 0·18 per 1,000 of the population of the province, according to the Census of 1901; in Munster 0·09 per 1,000; in Ulster 0·29 per 1,000; and in Connaught it was 0·07 per 1,000 of the population of the province.

The Abstracts of diseases and causes of deaths, commencing on page 112, give further information regarding the mortality from measles. Of the deaths, 439 were of males and 370 were of females. Of the total deaths (809) from measles, 679, or nearly 84 per cent, were of children who had not reached the age of 5 years; of the total deaths of males (439), there were 378, or about 86 per cent., who were under 5 years of age; and of the total deaths of females (370), there were 301, or about 81 per cent. who had not reached the age of 5 years. There were 93 deaths from measles registered in the county borough of Dublin, and 254 in the county borough of Belfast. These figures correspond to the rates of 0·25 per 1,000, and 0·71 per 1,000 of the estimated populations of the cities of Dublin and Belfast, respectively. In two of the counties, namely in the North Riding of Tipperary and in Leitrim there was no death from measles recorded.

In the following unions, or superintendent registrars' districts, alphabetically arranged, the deaths and rates were:—Athy 15 deaths, equal to a rate of 0·68 per 1,000 of the population of the union; Ballymoney 21 deaths, equal to a rate of 0·74 per 1,000; Carrick-on-Suir 31 deaths, equal to a rate of 1·75 per 1,000; Coleraine 31 deaths, equal to a rate of 1·04 per 1,000; Cork 25 deaths, equal to a rate of 0·19 per 1,000; Dingle 26 deaths, equal to a rate of 1·42 per 1,000; Dungannon 14 deaths, equal to a rate of 0·43 per 1,000; Limavady 11 deaths, equal to a rate of 0·53 per 1,000; Lisburn 31 deaths, equal to a rate of 0·67 per 1,000; Newtownards 15, equal to a rate of 0·36 per 1,000; Rathdrum 14, equal to a rate of 0·52 per 1,000; Swineford 15, equal to a rate of 0·34 per 1,000; and Wexford 18, equal to a rate of 0·55 per 1,000 of the population of the union, according to the Census of 1901.

Scarlet Fever.—The deaths from scarlet fever which were registered during the year 1905, were 170 in number, the average number of deaths from this disease in the decennium ending with the year 1904 being 344; the mortality in 1905 is also both absolutely and relatively less than in any year of the above-mentioned decennial period. The highest mortality from scarlet-fever occurred in the year 1896, when 752 deaths, corresponding to a rate of 0·17 per 1,000 of the estimated population, were registered. Of the deaths in 1905, 66 were of males and 104 were of females, 72 of the deaths, or about 42 per cent. of the total, being of children under 5 years of age, only 11 deaths however, occurring during the first year of life. Between the ages of 5 years and 10 years, the deaths of 20 males and 35 females occurred from scarlet-fever, that is, about 32 per cent. of the total deaths from the disease were of children between the ages of 5 years and 10 years. There were 20 deaths registered in Dublin county borough; 37 in Belfast county borough; 14 in each of the counties of Wexford and Down; and 11 in the county of Roscommon. In 10 counties there was not one death from scarlet-fever recorded, namely:—King's County, Longford, Meath, Queen's County, Westmeath—in the province of Leinster; Kerry, Tipperary North Riding, and Tipperary South Riding—in the province of Munster; county Fermanagh in Ulster; and county Leitrim in the province of Connaught. In the Abstracts commencing on page 136 it may be seen that 8 deaths from scarlet-fever were registered in the union of Castlereagh, corresponding to a rate of 0·24 per 1,000 of the Census population in 1901; 5 deaths were registered in the union of Monaghan; 7 in the union of New Ross; 6 in the union of Newtownards; and 5 in the union of Wexford.

Typhus.—The mortality from typhus—68 deaths—is 15 over that for the year 1904, in the course of which year 53 deaths were registered in Ireland. Of the 68 deaths, 36 were of males and 32 were of females; in Table XII., page xx., the sexes and age periods of the persons who died from typhus are given; and in the Abstracts commencing on page 136, the counties and unions in which the deaths from this disease were registered will be found.

Influenza.—A special table can be seen on page xviii., which gives information regarding "influenza," a disease which is responsible for a considerable number of deaths

TABLE XI.—Showing, by Provinces, Counties, &c., the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1905, with the rate per 10,000 of the population* represented by the deaths at all ages.

---

* See note (*) on page vii.

in Ireland since the year 1889. In the period under review, the deaths attributed to influenza amounted to 1,219, corresponding to a rate of 0·28 per 1,000 of the estimated population of Ireland. Of the total deaths 590 were of males and 629 were of females.

From Table XI., it appears that of those who died from "influenza" 228 (116 males and 112 females) were under 10 years of age; that 41 (17 males and 24 females) were aged 10 years and under 20 years; that 91 (43 males and 48 females) were aged 20 years and under 35 years; that 183 persons (78 males and 105 females) were aged 35 years and under 55 years; and that 676 of those whose deaths were due to "influenza" in the year 1905, viz.:—336 males and 340 females, were aged 55 years and upwards.

From the Table it appears that the largest death rates were recorded in the King's County, in Westmeath, in Monaghan, in Down, in Tyrone, in Armagh, and in Cavan, and that the lowest death rates from influenza were in Tipperary North Riding, Kildare, Wicklow, Clare and Kerry.

Whooping-cough.—The rate represented by the deaths (581) from whooping-cough in the year 1905 was 0·13 per 1,000 of the estimated population of the country; the average rate for the decennial period 1895-1904 was 0·27 per 1,000; and the rate for the year 1904 was 0·35 per 1,000. The rate in 1905 is lower than that recorded in any of the ten preceding years, the lowest in that decennium being 0·15 per 1,000 in the year 1900. The total deaths include those of 251 males and 330 females; of the former figure 236 were under 5 years of age, and of the latter figure 303 were under 5 years of age. The Abstracts commencing on page 136 give information regarding the incidence of deaths from whooping-cough in Ireland, according to provinces, counties and unions, or superintendent registrars' districts. It may be seen that in three counties—Meath, Fermanagh and Monaghan—there is no record of death from whooping-cough, while in each of the counties of Down and Mayo 48 deaths were registered. In the following unions 10 or more deaths occurred, namely:—in Athlone 11 deaths; in Athy 16 deaths; in Ballinrobe 10 deaths; in Baltinglass 11 deaths; in Banbridge 15 deaths; in Belfast 30 deaths; in Birr 14 deaths; in Dingle 19 deaths; in the union of North Dublin 10 deaths; in the union of South Dublin 34 deaths; in Dungannon 22 deaths; in Killarney 14 deaths; in each of Kilmallock, Larne, and Londonderry, 12 deaths; in Lurgan 29 deaths; in Middleton 14 deaths; in Newry 13 deaths; in Omagh 12 deaths; in Strabane 10 deaths; in Waterford 15 deaths; in Westport 23 deaths; and in Wexford 13 deaths.

Diphtheria.—The mortality from diphtheria, which includes deaths certified as from membranous croup, varied from 421 deaths in the year 1902 to 305 in each of the years 1895 and 1905, the lowest yearly mortality which was recorded during the period 1895-1905. The deaths in 1905 represent a slightly higher rate of mortality than in 1895, due to the decrease in the population of Ireland. Of the 305 deaths, 166 were of males, and 139 were of females. Of the 166 males, 90 were under 5 years of age; and of the 139 females, 79 were under 5 years of age. More than one-sixth of the total deaths were registered in the county boroughs of Dublin and Belfast, 26 deaths having been registered in the former, and 28 deaths in the latter city; and 50, or nearly one-sixth of the total deaths were registered in the counties of Cork, Limerick, Waterford and Londonderry, in which counties the respective county boroughs are situated. There were 13 deaths from diphtheria registered in the union of Ballymena, which number represents a rate of 0·24 per 1,000 of the population; and in Strabane union 13 deaths were also registered, which number is equal to an annual rate of 0·36 per 1,000 of the Census population of that area.

Enteric Fever.—Although the mortality rate (0·114 per 1,000) from enteric fever in 1905 slightly exceeds the rates in 1903 and 1904, namely, 0·109 and 0.106, respectively, it is considerably below the average rate for the ten years 1895-1904, which was 0·174 per 1,000; in 1898 the death rate reached 0·284 per 1,000 of the population estimated to the middle of that year. Of the total deaths in 1905, 260 were those of males, and 242 were those of females. In Table XII, page xx., the ages and sexes of those who succumbed are given.

In Table X., page xvi., the number of deaths from enteric fever in each of the provinces of Ireland is given, with corresponding rates for each of the 10 years 1896-1905. Of the total deaths (502) in 1905, there were 54 registered in Dublin county borough and 131 in Belfast county borough. These figures taken together are about

37 per cent of all the deaths from enteric fever registered in Ireland. In the counties of Cork, Limerick, Londonderry and Waterford, containing the respective county boroughs of the same name, the deaths registered from enteric fever were, respectively, 29, 26, 7 and 8. In Armagh union 11 deaths from enteric fever were registered; and in each of Newtownards and Omagh unions 13 deaths were registered. These numbers correspond to the rates of 0·23, 0·31, and 0·34 per 1,000 of the respective populations of these unions.

From Table XII., and the Abstracts it appears that in addition to 68 deaths from typhus and 502 deaths from enteric fever, there were 43 deaths which were classified as *pyrexia* (origin uncertain), these latter being returned as simple fever, continued fever, or ill-defined fever, and concerning which no further information was obtained.

TABLE XII.—Showing for the year 1905 the Deaths from the several forms of **Fever** at each Age-Period with the proportion to the number of the living at each Age represented thereby.

AGE-PERIODS.	DEATHS FROM FEVER.												No. of Deaths to 100,000 of the Living at same age.

Total	36	32	68	260	242	502	20	23	43	316	297	613	13·96

Diarrhœal Diseases.—Under one or other of the headings—Diarrhœa due to food—Epidemic Diarrhœa—Infective Enteritis—*Diarrhœa* (not otherwise defined)—Dysentery—no less than 1,318 deaths, corresponding to a rate of 0·30 per 1,000 of the estimated population of Ireland, were assigned in the classification for the year 1905. The numbers for each heading may be seen in the Abstracts commencing with page 112.

Of the total deaths from diarrhœal diseases 968, or about 73 per cent., were of children under 5 years of age. The deaths in Dublin county borough, numbering 237, and in Belfast county borough 303, taken together, constitute 41 per cent. of the total deaths from diarrhœal diseases for the whole of Ireland. In the counties of Cork, Limerick, Waterford and Londonderry, the deaths from diarrhœal diseases were 108, 50, 24, and 55, respectively, the total (237) constituting about 18 per cent. of the mortality from diarrhœal diseases; in the counties of Antrim, Armagh and Down, the deaths were, respectively, 60, 38, and 43, and in the aggregate—141—representing about 11 per cent. of the total deaths. These figures show that deaths from this group of diseases are much more numerous among the Urban than among the Rural populations of the country, as nearly 70 per cent. of the total deaths in the aggregate from diarrhœal diseases were found to have occurred in the county boroughs of Dublin and Belfast, the counties containing the county boroughs of Cork, Limerick, Waterford and Londonderry, and the counties of Antrim, Armagh and Down.

In addition to the 1,318 deaths from diarrhœal diseases registered in Ireland during the year 1905, 445 deaths were attributed to enteritis, 242 of these being deaths of children under 5 years of age; and 324 deaths were attributed to *gastro-enteritis.* Of the latter figure no less than 249 were deaths of children under 5 years of age.

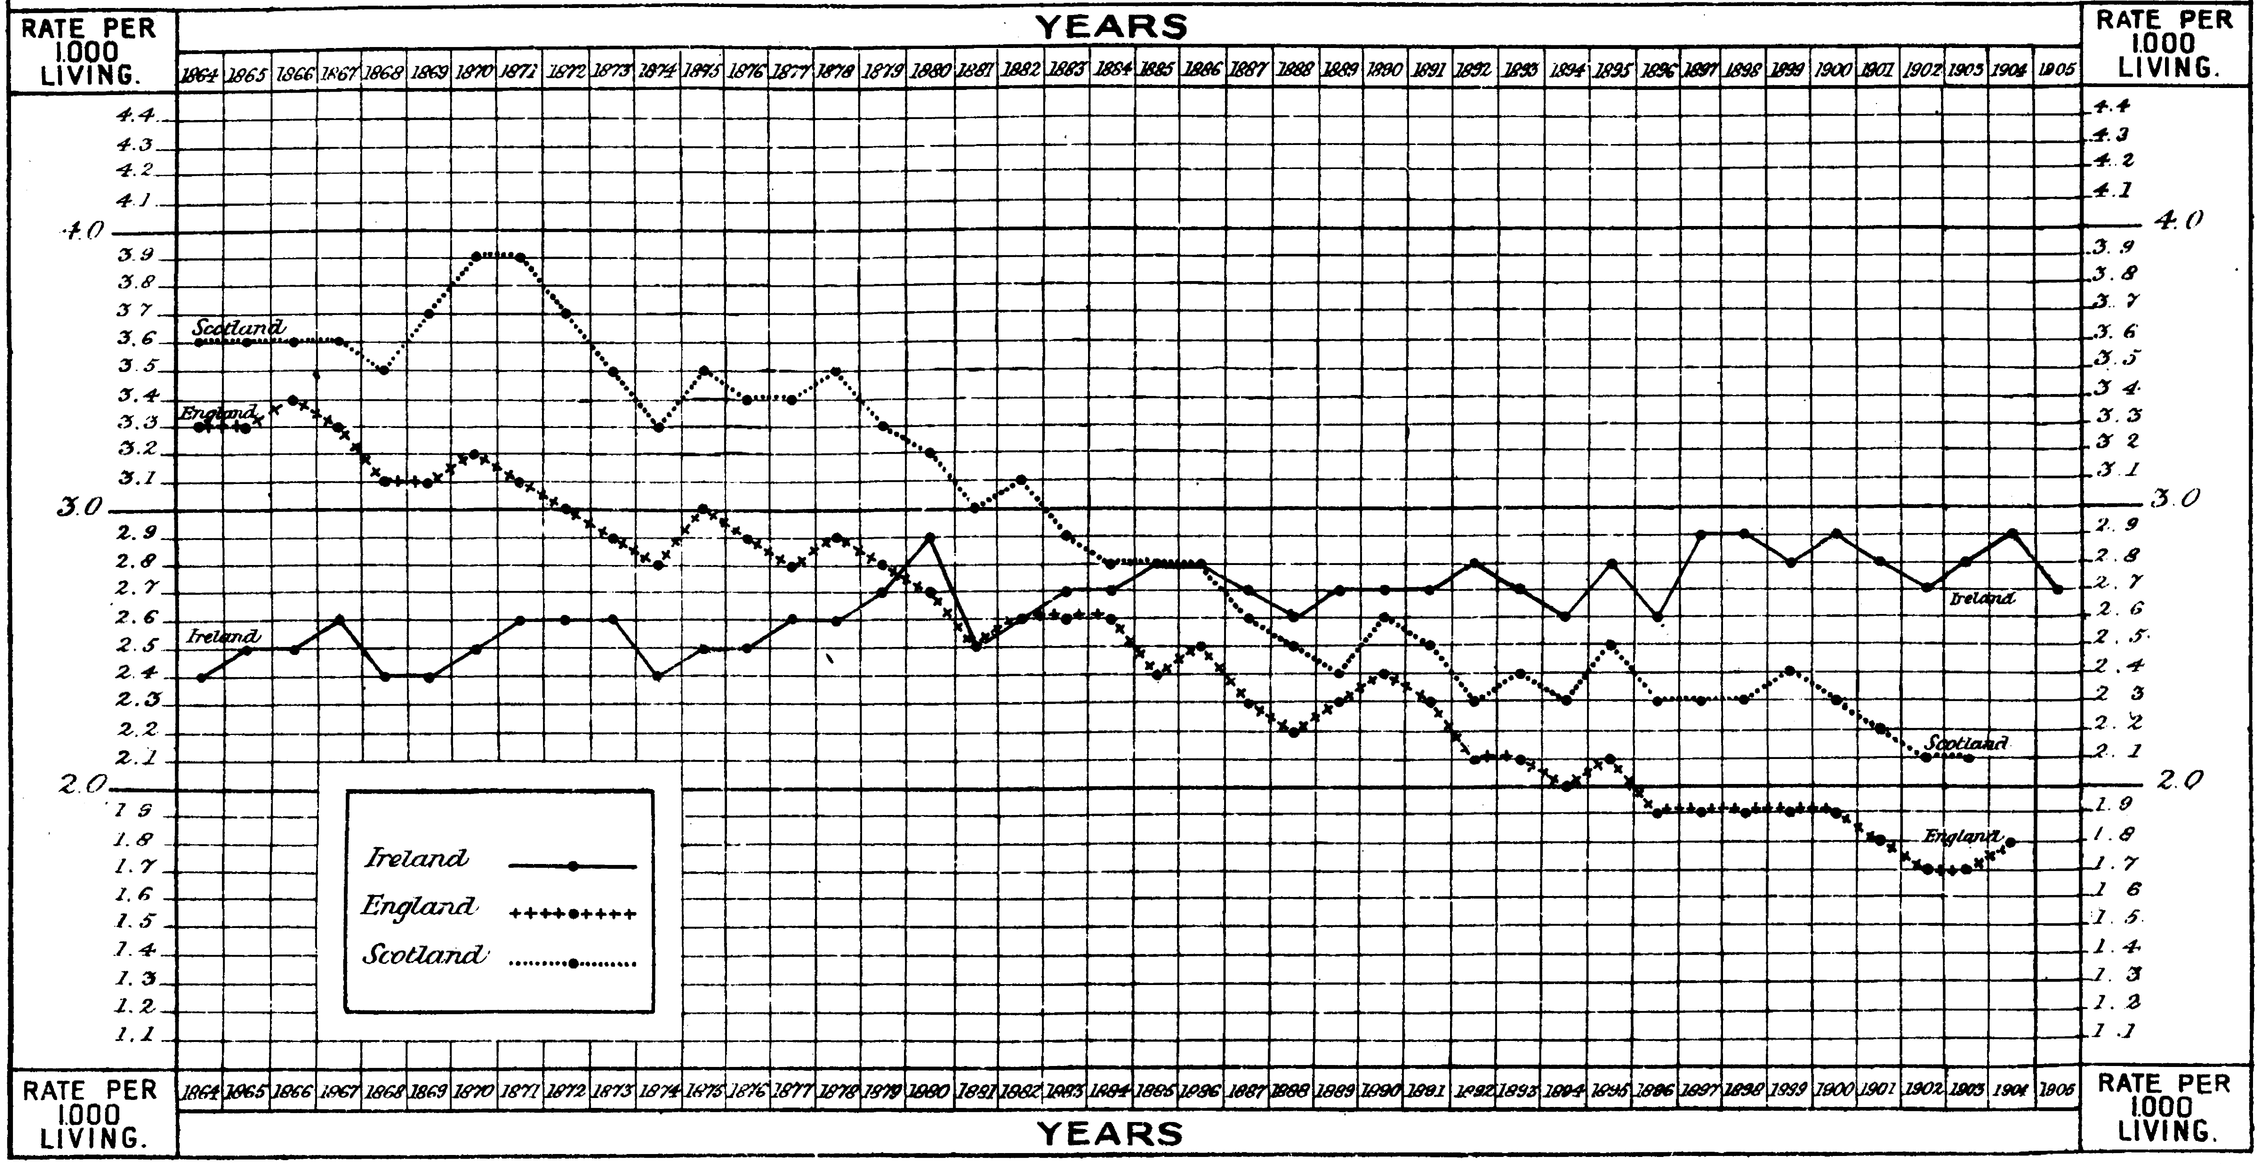
Rabies, (Hydrophobia).—Since the year 1898, and up to the termination of 1905, there has been no record of mortality from rabies in Ireland.

---

* Formerly described as "Simple Continued Fever"

TUBERCULOSIS.

DIAGRAM No. 3.—Showing the Death-rate in Ireland, as compared with England and Scotland, during each of the forty-two years 1864-1905.



(To face page XXI)

Puerperal Septic Diseases.—The number of women who lost their lives from puerperal septic diseases in the year 1905 was 227, which number represents a death rate of 2·2 mothers for every 1,000 infants whose births were registered during the year. The deaths included in this group were returned as follows:—126 from puerperal septicæmia, puerperal septic intoxication; 11 from puerperal pyæmia; 10 from phlegmasia alba dolens; and 80 deaths from *puerperal fever* (not otherwise described). Further reference to the deaths in this group will be made, in the paragraph dealing with deaths in connection with pregnancy and childbirth.

Pneumonia.—Under the general heading pneumonia, the deaths, which were attributed to lobar pneumonia, broncho-pneumonia, epidemic pneumonia and *pneumonia* (not defined) are included. The deaths thus returned were, respectively, 155, 1,152, 0, and 2,317, and amounted to 3,624, corresponding to a rate of 0·83 per 1,000 of the population estimated to the middle of the year 1905. Although the rate for all forms of pneumonia is above the average (0·79 per 1,000) for the 10 years 1895-1904 it is under the rate (0·85) for the preceding year, which was the highest rate recorded in the decennial period, excepting that for the year 1900, when the rate of 0·86 per 1,000 of the population was reached.

An inspection of the particulars regarding the ages of the decedents from lobar pneumonia and broncho-pneumonia shows that of the 155 persons whose deaths were due to lobar pneumonia only 12 were under 5 years of age, and only 15 died between the ages of 5 years and 25 years from this affection, and as regards the deaths from broncho-pneumonia it appears that 637 or more than half of the total deaths from this disease were of persons under the age of 5 years.

The Abstracts on page 136 and following pages show the occurrence of the deaths from pneumonia by the geographical areas. The number of deaths in the county borough of Dublin was 435, equal to a rate of 1·15 per 1,000; in the county borough of Belfast the number was 551, equal to a rate of 1·54 per 1,000; and in the county of Cork containing Cork county borough the deaths from pneumonia numbered 369, equal to a rate of 0·91 per 1,000 of the population.

Erysipelas, Pyæmia, Septicæmia, Septic Intoxication.—There were 122 deaths caused by erysipelas (67 of males, and 55 of females); septicæmia, septic intoxication (not puerperal) caused 69 deaths (38 of males, and 31 of females); pyæmia (not puerperal) caused 20 deaths (13 of males and 7 of females); there were 61 deaths assigned to other infective processes, 39 being those of males, and 22 of females,

TUBERCULOSIS.

I venture to invite your Excellency's special attention to the mortality from tuberculous disease during the year 1905. The number of deaths from all forms of tuberculous disease registered in Ireland during the year 1905 was 11,882, representing a rate of 2·71 per 1,000 of the population estimated to the middle of the year, or taking the mortality from the disease in relation to the deaths from all causes registered in 1905, it will be found that in every 100 deaths from the latter, 16 were the victims of tuberculous disease.

The preponderance of deaths from tuberculosis over the other principal causes of death is shown graphically in Diagram No. 2, opposite page xiii.

Diagram No. 3, facing this page, shows the death rate for all forms of tuberculous disease in Ireland for a period of 42 years, as compared with the rates for England and Wales and Scotland. From this it would appear that in the year 1864 the rate in England and Wales was 3·3 per 1,000, and that in 1903 it had fallen to 1·7 per 1,000, rising in 1904 to 1·8. In Scotland in 1864 the rate was 3·6 per 1,000, and in 1903 it had declined to 2·1 per 1,000. In Ireland in the year 1864 the rate was 2·4 per 1,000, but in 1904 it had increased to 2·9 per 1,000, falling in the year 1905—now the subject of review—to 2·7 per 1,000 of the estimated population.

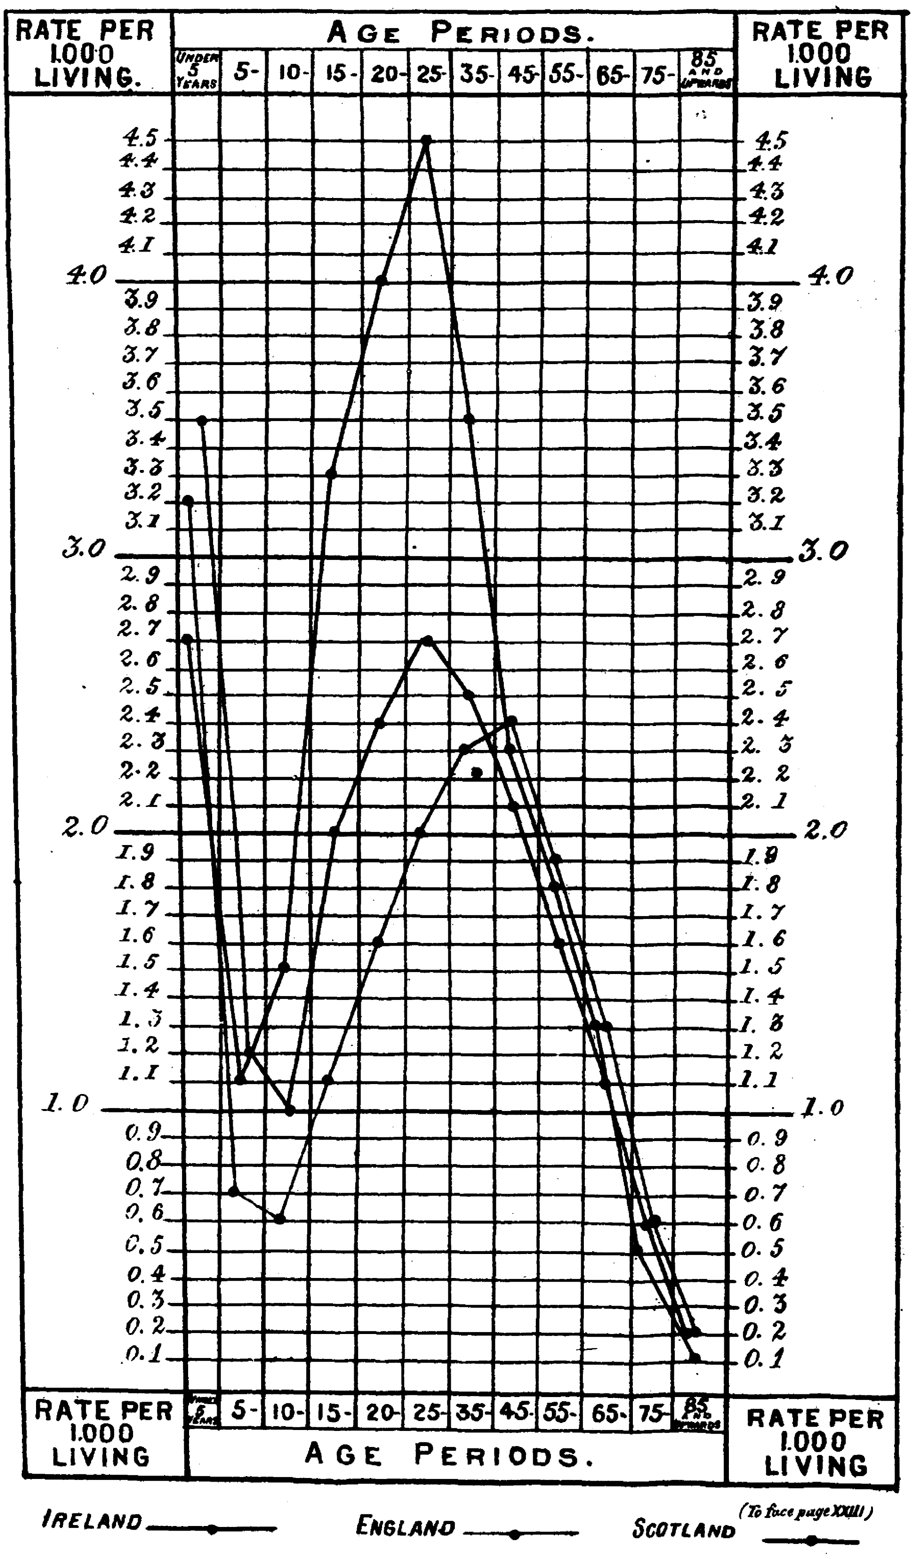
* These deaths are included in the general tables of Causes of Death.

DIAGRAM No. 4.—Showing the Proportion of Deaths from Tuberculosis at each age period to the number per 1,000 living at those ages in Ireland, as compared with England and Wales and Scotland in the Year 1903.



(To face page XXIII)

In Diagram 4, facing this page, the death rates from all forms of tuberculosis at certain age periods, for England and Wales, for Scotland, and for Ireland are given for the year 1903. In England and Wales the highest rate 3·2 per 1,000, appears in the population under 5 years of age ; this is also the case for Scotland, the rate in the case of Scotland being 3·5 per 1,000 living at that age period ; while the rate for deaths for tuberculous disease in the population of Ireland under 5 years of age was 2·7 per 1,000.

In Ireland the highest death rate occurred amongst those living at the age period 25 to 35 years, namely, 4·5 per 1,000. In England and Wales the rate at this age period was 2·0 per 1,000, and in Scotland it was 2·7 per 1,000, which was the highest rate for adults in that country among the selected age periods. Of the adult age periods, the highest rate in England and Wales appears amongst those living between the ages of 45 and 55 years, the rate for this period being 2·4 per 1,000.

The map facing page xxiv. gives the death rate per 1,000 of the population from all forms of tuberculosis for each poor law union, or superintendent registrar's district in Ireland for the year 1905 ; the deaths occurring from this disease in the lunatic asylums and in some of the principal charitable institutions of persons admitted thereto from Unions other than those in which these institutions are situated, having been assigned to the Union areas to which the deceased persons originally belonged. As before stated the general death rate from all forms of tuberculous disease was 2·71 per 1,000 of the population. It will be seen from the map that the poor law unions having the lowest death rates were Tulla 0·92 per 1,000, Lisnaskea 0·93, Borrisokane 1·05, Castletown 1·07, Portumna 1·10, Dunfanaghy 1·14, and Kenmare 1·16 ; and those having the highest death rates were Londonderry 3·35 per 1,000, Castlederg and Kinsale each 3·48, Waterford 3·56, Belfast 3·85, Dublin South 4·38, Cork 4·53, and Dublin North 4·70.

The deaths from tuberculous disease are classified under the following headings—pulmonary tuberculosis (*phthisis*), tuberculous meningitis, tuberculous peritonitis, *tabes mesenterica*, lupus, tubercle of other organs, general tuberculosis, *scrofula*.

Tuberculous Phthisis (*Phthisis*).—The deaths registered during the year 1905 from tuberculous affections of the lungs amounted to 9,216, which figure corresponds to a death rate of 2·10 per 1,000 of the population. Of the 9,216 deaths, 4,485 were of males and 4,731 were of females.

The following tabular statement shows, by sexes and by certain age periods, the total number of deaths from phthisis registered in Ireland during the year 1905, with the respective death rates per 1,000 living at each age period.

AGE PERIODS	Deaths from Phthisis in Ireland.					
	Total of both Sexes		Of Males		Of Females	
	Number	Rate per 1,000	Number	Rate per 1,000	Number	Rate per 1,000

Average for 34 years, 1871-1904	10,075·4	975·2	1,081·9	977·5	13,110·0	2·7	88,223·6	18·1	14·9
1905 . . .	9,216	710	437	1,519	11,882	2·7	75,071	17·1	15·8

Tuberculous Meningitis.—The deaths from tuberculous meningitis were 710 in number, 355 being those of males and 355 of females. Of the deaths of males, 188 were under the age of 5 years, and of the deaths of females, 162 were under that age. The 710 deaths from tuberculous meningitis represent a death rate of 0·16 per 1,000 of the estimated population of Ireland. In the Abstracts it may be seen that 129 deaths from tuberculous meningitis were registered in the county borough of Dublin, and 89 were registered in the county borough of Belfast.

Tuberculous Peritonitis.—The deaths returned as from tuberculous peritonitis numbered 218 (of males 101 and of females 117); there were 219 deaths returned as from *tabes mesenterica*, 104 of these being deaths of males, and 115 of females. The aggregate of the above deaths (numbering 437) corresponds to a rate of 0·10 per 1,000 of the population. Of the 437 deaths, 227, or about 52 per cent. of the total, were deaths of children under 5 years of age.

Other Tuberculous Diseases.—In the aggregate the deaths from lupus, tuberculous disease of other organs or parts, general tuberculosis and *scrofula* were 1,519, corresponding to a rate of 0·35 per 1,000 of the estimated population. The total (1,519) as may be seen in the Abstracts, comprises 25 deaths from lupus (of males 7 deaths and of females 18 deaths); 552 deaths from tubercle of other organs or parts (of males 283 deaths and of females 269 deaths); 880 deaths assigned to general tuberculosis (of males 402 and of females 478 deaths); and 62 deaths returned as from *scrofula* (of males 39 and of females 23).

MORTALITY FROM TUBERCULOSIS.

Rate per 1,000 of the Population (according to the Census of 1901), represented by the Deaths from

ALL FORMS OF TUBERCULOSIS,

Registered in each Poor Law Union, or Superintendent Registrar's District in Ireland during the year 1905, deaths in Lunatic Asylums and certain institutions having been assigned to the Unions to which the deceased belonged.

N.B.—For the Unions of Belfast, Dublin North, Dublin South, and Londonderry, the estimated population in the year 1905 has been taken as the basis of calculation.

A. THOM LIMD

(To face page XXIV).

Alcoholism.—The deaths of 190 persons—153 men and 37 women—were attributed directly to alcoholism in the year 1905. In the year 1904, deaths due to alcoholism numbered 212 (161 of these being of men and 51 of women). During the year 1905, 8 deaths were reported as being caused by acute alcoholic poisoning which are not included in the total (190). The deaths, however, of 23 persons who succumbed to violence of an accidental character, while they were under the influence of intoxicating liquor, are included in the total.

Rheumatism.—There were 147 deaths from rheumatic fever; acute rheumatism—of males 82, and of females 65; *rheumatism of heart* caused the deaths of 52 persons—of males 16, and of females 36; chronic rheumatism was accountable for 438 deaths—of males 190, and of females 248; and there were 66 deaths from rheumatic arthritis—of males 20, and of females 46.

Gout.—In 1904 the number of deaths attributed to gout was 20, while in the period under review it was 17 (of males 11 deaths, and of females 6 deaths).

MALIGNANT DISEASES.

The year 1905 shows a further increase in the death rate from malignant diseases. The deaths under this heading include all those reported as having been caused by the varieties of carcinoma, of sarcoma, or by cancer, or malignant disease (not otherwise defined).

The number of deaths from these causes during the year 1905 in the aggregate was 3,291, corresponding to a rate of 0·75 per 1,000; in the year 1904 the total of the deaths from malignant diseases was 3,055, and the rate corresponding to this figure was 0·69 per 1,000. Of the total deaths in the year 1905, there were 1,443 deaths of males, corresponding to a rate of 0·66 per 1,000 of the estimated male population of Ireland, and there were 1,848 deaths of females, corresponding to a rate of 0·84 per 1,000 of the estimated female population of the country. In the year 1904 the corresponding rates were for males 0·63 per 1,000, and for females 0·76 per 1,000.

In the Abstracts the particulars of the deaths from malignant diseases are given, and there it may be seen, as also in Table XV., page xxvi, that the number of deaths from these diseases which occur among persons under the age of 35 years is proportionally small, being for males 66 deaths, and for females 87 deaths. If the deaths under 35 years be omitted from the totals and calculations made, which are based on the estimated numbers of males and of females in the population, it is found that the death rate from all forms of malignant disease for both sexes, 35 years of age and upwards, was 2·08 per 1,000, that the death rate for males, at 35 years of age and upwards, was 1·88 per 1,000 of the estimated population of males at that age period; and that the death rate for females at 35 years of age and upwards was 2·27 per 1,000 of the estimated population of the females at that age period.

Table XV. shows that the age period in which the highest mortality occurred for both males and females was from 65 to 75 years, the rates for males being 4·41 and the rate for females 4·51 per 1,000 of the respective populations of males and of females at that age period.

Diabetes Mellitus.—The deaths from diabetes mellitus which were 288 in the year 1902, 307 in the year 1903, and 359 in the year 1904, declined to 308 in 1905. Of the 308 deaths, 200 were of males and 108 were of females.

DISEASES OF SPECIAL ORGANS.

Meningitis.—The deaths from meningitis registered during the year numbered 838. Of these 457 were of males and 381 were of females, the deaths of males and females under the age of 5 years numbering 191 and 144 respectively. The deaths (838) are equal to a rate of 0·19 per 1,000 of the estimated population. The deaths of males under 5 years of age from meningitis are equal to 0·86 per 1,000 of the male population at that age period, and the deaths of females under 5 years are equal to an annual rate of 0·67 per 1,000 of the female population at that age period.

TABLE XV.—Showing the Deaths registered from Malignant Diseases* in Ireland during the Year 1905, by Sexes, Ages, and parts affected.

* Including Carcinoma, Sarcoma and Cancer, Malignant Disease.

Softening of the Brain.—To this condition the deaths of 74 males and of 68 females were attributed.

General Paralysis of the Insane.—The deaths from general paralysis of the insane were 67, as compared with 88 deaths from this condition in 1904. Of the 67 deaths in 1905, 55 were of males and 12 were of females, all these deaths being of persons between the ages of 25 years and 65 years, with two exceptions.

Epilepsy.—The deaths registered from epilepsy, which in the year 1905 were 321, as against 330 in the preceding year, include 186 deaths of males and 135 deaths of females. Only 4 deaths under 5 years of age (all of males) are reported as having been caused by epilepsy during the year 1905.

Convulsions.—The term *convulsions* should be avoided when possible in certifying the cause of death, unless some explanation of the morbid condition which causes the symptom is also given; notwithstanding the ill-defined nature of the above term, the deaths of no less than 1,549 persons were recorded in 1905 as from *convulsions.* The total represents a rate of 0·35 per 1,000 of the population, and includes the deaths of 865 males and of 684 females. The number of children under 5 years of age who were stated to have died from convulsions was 1,523, and of this figure 1,279 were infants under one year of age, the latter being 13·1 per cent. of the total deaths of infants under one year of age who died in Ireland during the year 1905.

Locomotor Ataxy.—The deaths of 43 males and of 3 females were caused by locomotor ataxy.

Neuritis, Peripheral, Poly-neuritis.—Of 41 deaths attributed to one or other of these causes, 18 were those of males and 23 were of females.

Tumour of the Brain.—The deaths from tumour of the brain which were not referred to malignant disease, syphilis, or tuberculous disease, were 38 in number, 19 being deaths of males, and 19 of females.

Diseases of the Heart.—Under this heading there were registered 1,792 deaths from valvular heart disease, endocarditis (not infective), 42 deaths from pericarditis, 19 deaths from hypertrophy of the heart, 60 deaths from angina pectoris, 161 deaths from dilatation of the heart, 225 deaths from fatty degeneration of the heart, and 5,871 deaths from *syncope, heart disease* (not specified); in all a total of 8,170 deaths, corresponding to a rate of 1·86 per 1,000 of the estimated population of Ireland for the year 1905.

Diseases of the Blood Vessels.—In the aggregate the deaths of 3,092 persons were ascribed to diseases of the blood vessels, including 904 deaths returned from cerebral hæmorrhage, cerebral embolism; 1,801 deaths from *apoplexy, hemiplegia*; 68 deaths from aneurysm (of males 56 and of females 12 deaths); 168 deaths from senile gangrene; 70 deaths from embolism, thrombosis (not cerebral); 19 deaths from phlebitis; 11 deaths from varicose veins; and 51 deaths from other diseases of the blood vessels. The total deaths from the above-mentioned conditions are equal to a rate of 0·70 per 1,000 of the population of Ireland estimated to the middle of the year 1905.

Bronchitis.—Of the total deaths from diseases of the respiratory system, in number 9,012 (corresponding to a rate of 2·05 per 1,000), there were 7,462 caused by bronchitis, the latter deaths being nearly 10 per cent of the total deaths from all causes registered in Ireland in the year 1905. Of the total, there were 3,559 deaths of males and 3,903 deaths of females. Deaths from bronchitis, though not so numerous as deaths from tuberculous disease, form one of the largest factors in the death rate of Ireland.

Pleurisy.—Of 150 deaths in which pleurisy was stated to have been the primary cause, 88 were deaths of males and 62 were those of females.

In the year 1904 the primary cause of the deaths of 35 persons was returned as from empyema, and in the year 1905, 23 such deaths were returned. As the result of enquiry these deaths were found to be associated with other diseased conditions which are shown in the following table, in combination with the sexes and ages of the deceased.

TABLES (A AND B).—Showing for the years 1904 and 1905, by age periods, the causes with which the deaths directly attributed to Empyema of 58 persons (48 males and 10 females) were associated.

(A).—Causes (by Age Periods) with which 48 Deaths of Males from Empyema were associated.

Gastric Ulcer.—The deaths of 123 males and of 192 females were reported as being due to gastric ulcer.

Appendicitis, Perityphlitis.—The deaths of 49 males, and 40 females, in all 89 persons, were due to appendicitis, perityphlitis. In the year 1904, deaths from these causes numbered 97 (of males 52 and of females 45 deaths).

Other Diseases of the Digestive System.—On pages 118 and 119 the figures for the deaths from other diseases of the digestive system will be found. Among them hernia caused the deaths of 76 males and 53 females ; intestinal obstruction caused the deaths of 227 males and of 186 females ; and to cirrhosis of the liver the deaths of 194 males and of 121 females were tabulated.

Acute Nephritis, Chronic Nephritis.—Acute nephritis was the cause of death of 413 persons, 210 being those of males and 203 of females ; chronic nephritis accounted for 971 deaths, (of males 569 and of females 402). There were 31 deaths from calculus (not biliary), 18 of males and 13 of females.

Diseases of the Uterus and Ovary.—There were 21 deaths caused by ovarian tumours, and 43 deaths were caused by uterine tumours. With regard to these deaths the tumours were non-malignant, or on further enquiry, no information was obtained regarding the nature of the disease.

Pregnancy and Childbirth.—The deaths from puerperal septic diseases have been already referred to on page xxi. In the abstracts the particulars of the deaths of women from causes that were of an obstetric nature are stated, and in Table XIII., page xxii, in addition to the above, the particulars of all the deaths of women in Ireland during the year 1905 which were returned as being associated with pregnancy or childbearing are set forth. The total of all deaths associated with pregnancy and childbearing in the year 1905 was 656, which figure corresponds to a death rate of 6·38 mothers per 1,000 of the births registered in the year. Deducting the deaths (83) which were classified to the complicating disease, the figure would stand at 573, this number representing a death rate of 5·57 mothers per 1,000 births registered in Ireland in the year 1905.

In the year 1904 the corresponding rates were respectively 6·57 and 5·62 deaths of mothers in every 1,000 births registered during that year.

ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH.

I would earnestly desire to call the attention of the Medical Profession in Ireland to the figures in the Abstracts, which refer to ill-defined causes of death. Such causes as "Debility," "Dropsy," "Tumour," "Abscess," "Hæmorrhage," are useless for the purposes of accurate mortality statistics. I may also refer to the number of deaths which are registered in Ireland as not being certified, or not being medically attended.

During the year I issued a circular letter to Medical Practitioners respecting this important matter.

VIOLENCE.

The annual death rate represented by the deaths due to violence in the year 1905 was 0·41 per 1,000 of the estimated population, the total number of these deaths being 1,788. Of these 1,588 were from accidental causes (of males 1,077, and of females 511); the deaths from homicide were 42 in number (of males 33, and of females 9); and the deaths by suicide were 157 (of males 117, and of females 40). One death, that of a male, was registered as from execution, he having suffered the extreme penalty of the law.

Amongst the deaths from accidental violence were 374—of males 152, and of females 222—from burns and scalds (of the total, 189 were of children under 5 years of age); 301 deaths by drowning; 211 deaths by accidents with vehicles and horses; and 184 by accidental falls.

In Table XVI., page xxx., the deaths from poison registered in 1905 are given; the ages and sexes of the deceased are distinguished; the name of the poison or poisonous gas is stated; and whether by accident, by suicide, or by homicide, is set forth.

AGES.

Deaths of infants under 1 year old numbered 9,792, being equal to 95 deaths in each 1,000 of the births registered. The corresponding average rate for the preceding ten years was 103.

Amongst children under 5 years of age 15,123 deaths occurred—a mortality equal to 34·7 in every 1,000 of the number living at that age. Of these 8,172 were boys and 6,951 girls; the former number representing 36·7 in every 1,000 boys, and the latter 32·6 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 93 per 1,000 of the number of the living at that age.

Among the deaths registered are 613 of persons stated to have been aged 95 years or upwards—278 males and 335 females; of these 152 (63 males and 89 females) were returned as having been aged 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

EMIGRATION.

From the Returns collected and forwarded to me by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, it appears that the number of emigrants (natives of Ireland) who left Ireland during the year 1905 was 30,676; of these 16,082 were males and 14,594 were females. Of the whole number, 3,937 were from the province of Leinster; 9,002 from Munster; 10,236 from Ulster; and 7,501 from Connaught.

Of the total emigrants from Ireland in 1905, 8·9 per cent. were under 15 years of age; 84·1 per cent. were between 15 and 35 years old; and 7·0 per cent. were 35 or upwards.

TABLE XVI.—Showing the Deaths registered from Poison in 1905, distinguishing the Sex and Age of deceased, the Name of the Poison or Poisonous Gas, and whether Accidental, Suicidal, or Homicidal.

* Prices derived from returns received from Messrs. "Bolands, Limited," and Messrs. "Johnston, Mooney, and O'Brien, Limited."
† Compiled from Returns furnished by the Local Government Board.
‡ Not including those relieved by means of works devised for the relief of distress, viz.:—3,180 in March Quarter, 13,656 in June Quarter and 2,048 in September Quarter.

From a retrospect of the period covered by the above Table, *i.e.*, for 1905, and the ten years preceding, it is found that beef was lowest in the year 1896, when the average prices ranged from 43*s.* 6*d.* to 54*s.* per cwt., and in 1898, when they ranged from 44*s.* 6*d.* to 53*s.*; bread was cheapest in 1895, when the average price (1st quality, delivered) was 4¾*d.* per 4 lb. loaf. Oatmeal and potatoes were cheapest in 1896, in which year the average price of oatmeal (1st quality) was 12*s.* 7*d.* per cwt.; and the average prices of potatoes ranged from 1*s.* 11*d.* to 2*s.* 11*d.* per cwt. The highest average price of bread was 6¼*d.* per 4 lb. loaf in 1898, and of oatmeal 15*s.* 3*d.* per cwt. in 1898; the highest range for potatoes was from 3*s.* 4*d.* to 4*s.* 7*d.* per cwt. in 1900, and for beef, from 55*s.* 6*d.* to 59*s.* 6*d.* per cwt. in 1902.

I desire to express my obligations to the Local Government Board for Ireland for the Returns with which they favoured me. These showed that the average number of workhouse inmates in Ireland on Saturdays during the year 1905 was 44,081, being 488 over the average for the preceding year; and that the average number of persons receiving out-door relief (see Table XVII.) was 57,916, or 1,492 over the corresponding number for 1904.

THE WEATHER.

By the kind permission of the Editor of the "Dublin Journal of Medical Science," The following particulars and those given on pages are 147-171 presented. These particulars have been abstracted from Returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, B.A., M.D., DUB.; D.SC., OXON; F.R.C.P.I.; F.R. MET. SOC.; and published in the Journal during the years 1905-1906. The Tables on pages 172-3 and 178, also are founded on Sir John Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1905 was 29·961 inches. The highest observed reading was 30·999 inches at 9 P.M. on January 28th. The lowest observed reading was 28·077 inches, about 5 A.M. on March 15th. The extreme range of atmospherical pressure was 2·922 inches, as compared with 2·137 inches in 1904.

The *Mean Temperature* of the air for the year was 50·4°. The highest reading was 81·8° on July 14th, and the lowest reading was 23·6° on November 19th. The average mean temperature for the years 1885-1904 was 49·6°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 50·6°.

Rain fell on 193 days, including snow or sleet on 13 days and hail on 25 days. The average annual number of rainy days in the years 1885-1904 was 195·9. The total rainfall measured 25·277 inches, compared with an average of 27·438 inches in the twenty years 1885-1904. During the first half of 1905 (January to June, inclusive) the rainfall was 10·201 inches on 92 days; during the second half (July to December, inclusive) 15·076 inches fell on 101 days.

As regards the *Direction of the Wind,* 730 observations were made during the year, with this result—N., 41; N.E., 63; E., 60; S.E., 56; S., 50; S.W., 144; W., 206; N.W., 96; Calms, 14.

In concluding this Report, I desire to express my acknowledgments to Dr. Ninian M. Falkiner, Medical Superintendent of Statistics in this Department, for the valuable assistance he has afforded me in its preparation, more particularly with reference to the Statistics of Disease and Causes of Death.

I have the honour to be,

Your Excellency's faithful Servant,

ROBERT E. MATHESON,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
DUBLIN, 28*th July* 1906.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1905.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1905.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	AREA in Statute Acres.	Population, 1901.	TOTAL.			BIRTHS.				DEATHS.		Excess of Births over Deaths.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances. See note (*), pp. 4-5.

The letter *W*. denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign(—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

BIRTHS AND DEATHS Registered in the Year 1905—REGISTRARS' DISTRICTS arranged by COUNTIES and SUPERINTENDENT REGISTRARS' DISTRICTS—*continued.*

---

* The boundaries of these Districts were altered on the 1st April, 1905, by the transfer of the District Electoral Divisions of Brewsterfield, Clydagh, and Flesk from the Registrar's District of Coom to Killarney, No. 2; the District Electoral Division of Knocknahoe from Killarney, No. 2, to Coom; and portion of the District Electoral Division of Muckross from Killarney, No. 2, to Killarney, No. 1. The Births and Deaths are for the Districts in which they were registered.

---

* The boundaries of these Districts were altered on the 1st October, 1905, by the transfer of portions of the District Electoral Divisions of Easky West, and Rathmacurkey, respectively, from the Registrar's District of Easky to that of Castleconor. The Births and Deaths are for the Districts in which they were registered.

Note.—The Number of Marriages *Registered in each Quarter of the Year* 1905 *will be found stated in the Abstract of Marriages commencing at Page* 2.

NOTE.—This Table has been constructed for the year 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over census numbers for 1861 and 1871 as explained for the last period.

1872-1905—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81, 1882-91, and 1892-1901, to allow for the discrepancy between the number thus arrived at for 1881, 1891, and 1901 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION IN IRELAND according to the Census Returns of 1861, 1871, 1881, 1891, and 1901.

Periods.	Sexes.	AGES—YEARS.														Total.
		Under 1.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 25.	25 and under 35.	35 and under 45.	45 and under 55.	55 and under 65.	65 and under 75.	75 and under 85.	85 and under 95.	95 and upwards.

* In 3,838 instances in 1861—2,453 males, and 1,385 females; in 3,769 instances in 1871, viz., 2,176 males, and 1,593 females; in 2,996 instances in 1881, viz., 1,765 males, and 1,231 females; and in 1,786 instances in 1891, viz., 852 males, and 934 females, the age was not stated in the Returns.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1905.

By SIR JOHN W. MOORE, B.A., M.D., DUBL.; D. SC., OXON.; F.R.C.P.I.; F.R., MET. SOC.

(Extracted from the *Dublin Journal of Medical Science.*)

JANUARY.—An open, rather cloudy, month, with very little frost in Ireland—often dull, with a heavy downpour of cold rain and sleet in parts of the Dublin district on the 15th and 16th. The month was remarkable for the number of anticyclones which appeared from time to time over Central and Eastern Europe, and for the frequency of atmospheric depressions in the extreme N.W. and N. The most energetic depression of the month was that which passed slowly in a north-easterly direction along the west Coast of Ireland between the 15th and 17th. In it the barometer fell to the low level of 27·99 inches at Blacksod Point, Co. Mayo. This reading is thrown into bold relief by the fact that on the 28th the barometer reached or slightly exceeded 31 inches all over the Southern half of Ireland. Roche's Point, Cork Harbour, reported 31·03 inches both morning and evening on the 28th. At St. Mary's, Scilly Isles, the reading at 6 p.m. of the day named was 31·06 inches. This was the highest pressure recorded in the British Islands since January 31, 1902, on which day the barometer rose to 30·118 (30·12) inches at Aberdeen. It is noteworthy that coincidently with the high pressure of the 28th observed in Ireland, England, and the West of France, the barometer was down to 28·99 inches at Bodö, in the North-west of Norway. While the weather was mild in Ireland, and Scotland also, periods of severe cold were experienced in Central and South-eastern England, in which districts dense fogs were common.

The duration of bright sunshine was estimated at 57·75 hours, the daily average being 1·86 hours. The corresponding values for January, 1901, were 64 hours and 2·1 hours; 1902, 54 hours and 1·7 hours; 1903, 56·5 hours and 1·8 hours; and 1904, 49·75 hours and 1·6 hours.

In Dublin the arithmetical mean temperature (43·5°) was above the average (41·6°) by nearly 2 degrees; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·6°. In the forty years ending with 1904, January was coldest in 1881 (M. T.=33·2°), and warmest in 1898 (M. T.=47·8°). In 1902 the M. T. was 43·0°; in 1903 it was 42·1°; and in 1904, 42·6°.

The mean height of the barometer was 30·182 inches, or 0·308 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·999 inches at 9 p.m. of the 28th, having fallen to 28·779 inches at 9 p.m. of the 16th. The observed range of atmospheric pressure was, therefore, 2·220 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·6°, or 0·7° above the value for January, 1904. Using the formula, *Mean Temp.*=*Min.*+(*Max.*—*Min.*)×·52, the M.T. becomes 43·6°, compared with a thirty years' (1871-1900) average of 41·7°. The arithmetical mean of the maximal and minimal readings was 43·5°, compared with a thirty years' average of 41·6°. On the 6th the thermometer in the screen rose to 53·9°—wind, W.; this reading was repeated on the 8th, wind, S.W. On the 26th the temperature fell to 29·9°—wind, W. The minimum on the grass was 25·5°, also on the 26th.

The rainfall was 1·897 inches, distributed over 14 days. Of this amount ·589 inch fell on the 16th. The average rainfall for January in the thirty-five years, 1866-1900, inclusive, was 2·230 inches, and the average number of rainy days was 18. The rainfall, therefore, and rainy days were below the average. The record rainfall for January was in 1895—namely, 5·711 inches on 24 days. In 1876, only ·406 inch was measured on but 9 days. In 1903, 3·269 inches fell on 20 days; in 1904, 2·535 inches on 19 days.

The atmosphere was foggy on the 1st, 13th, 18th, 22nd, 24th, 25th and 26th. High winds were noted on 14 days, reaching the force of a gale on 8 days—the 6th, 8th, 11th, 14th, 15th, 16th, 17th and 30th. Snow or sleet fell on the 9th, 15th, and 16th; hail on the 15th and 16th. Lunar halos were seen on the 17th and 18th. Temperature exceeded 50° in the screen on 8 days; while it fell to 32° in the screen on only 2 nights, compared with 3 nights in 1904, 7 nights in 1903 and 1902, 3 in 1901, 2 in 1900, 4 in 1899, only 1 night in 1898, 13 nights in 1897, only 3 in 1896, but 18 in 1895. The minima on the grass were 32° or less on 9 nights, compared with 11 nights in 1904, 9 in 1903, 12 in 1902, 11 in 1901, 13 in 1900, 16 in 1899, only 3 in 1898, 21 in 1897, 8 in 1896, and 29 in 1895.

In Dublin the rainfall up to January 31st, 1905, amounted to 1·897 inches on 14 days, compared with 2·535 inches on 19 days in 1904, 3·269 inches on 20 days in 1903, 1·614 inches on 12 days in 1902, 2·672 inches on 17 days in 1901, 2·579 inches on 27 days in 1900, 2·483 inches on 24 days in 1899, 1·786 inches on 14 days in 1898, 2·694 inches on 17 days in 1897, only ·720 inch on 14 days in 1896, and with a thirty-five years' average (1866-1900) of 2·230 inches on 18 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Maurice S. Moore, reports that the mean height of the barometer was 30·184 inches, the range of atmospheric pressure being from 28·778 inches at 9 p.m. of the 16th to 31·007 inches at 9 p.m. of the 28th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·2°. The arithmetical mean of the daily maximal and minimal temperatures was 43·8°. The screened thermometers rose to 53·9° on the 6th, and fell to 30·0° on the 26th. On the 18th the grass minimum was 22·0°, while on the 26th it was 22·8°. On the 29th the black bulb *in vacuo* rose to 80·7°. Rain fell on 14 days to the amount of 1·744 inches, the greatest fall in 24 hours being ·510 inch on the 16th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 39·5 hours, of which 4·7 hours occurred on the 12th, 18th, and 28th, respectively. The mean daily sunshine was 1·3 hours. The mean temperature of the soil at a depth of one foot was 41·9° at 9 a.m.; at a depth of 4 feet it was 44·7° at 9 a.m.

The rainfall at Leeson Park, Dublin, is given by Dr. C. Joynt, F.R.C.P.I., as 2·020 inches on 14 days, ·510 inch having been measured on the 15th, and ·625 inch on the 16th. In 1904, 21·910 inches of rain fell at Dr. Joynt's station.

M. Robert O'B. Furlong, C.B., reports that at Cloneevin, Killiney, Co. Dublin, the rainfall was 2·29 inches on 12 days, ·70 inch being measured on the 15th. The average fall in January for the 20 years, 1885-1904, was 2·34 inches on 17·2 days. In 1896 the rainfall was ·70 inch on 9 days; in 1897, 3·08 inches on 20 days; in 1898, 1·58 inches on 13 days; in 1899, 2·93 inches on 22 days; in 1900, 2·82 inches on 25 days; in 1901, 2·83 inches on 15 days; in 1902 1·62 inches on 12 days; in 1903, 2·82 inches on 21 days; and in 1904, 2·42 inches on 17 days. Sleet or hail fell on the 15th and 16th, when there was a S.E. gale.

At Knockdolian, Greystones, Co. Wicklow, the rainfall measured by Mr. R. Cathcart Dobbs, J.P., amounted to 1·005 inches on 11 days, compared with 2·735 inches on 17 days in 1904; 3·300 inches on 15 days in 1903; 1·860 inches on 9 days in 1902; 4·035 inches on 16 days in 1901; 3·766 inches on 24 days in 1900; 4·395 inches on 24 days in 1899; 2·345 inches on 13 days in 1898; 3·660 inches on 20 days in 1897; and only ·485 inch on 7 days in 1896. The heaviest fall in 24 hours was ·350 inch on the 15th.

Dr. B. H. Steede writes that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell to the amount of 1·327 inches on 11 days, the maximal fall in 24 hours being ·495 inch on the 15th. The shade thermometers rose to 52·5° on the 7th, and fell to 32·0° on the 18th and 19th. In January, 1899, the rainfall at this Second Order Station, was 4·760 inches on 23 days; in 1900, 3·810 inches on 28 days; in 1901, 3·541 inches on 14 days; in 1902, 1·666 inches on 12 days; in 1903, 4·320 inches on 19 days; and in 1904, 3·310 inches on 18 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, the rainfall was 2·38 inches on 16 days, ·81 inch being measured on the 16th. The corresponding figures for 1902 were 2·28 inches on 14 days, for 1903, 3·88 inches on 19 days, and for 1904, 3·59 inches on 25 days. The mean shade temperature was 43·0°, compared with 40·6° in 1902, 41·9° in 1903, and 42·4° in 1904, the extreme readings being—highest, 52°, on the 5th, 6th, and 8th; lowest, 31°, on the 26th.

The rainfall at the Green, Malahide, Co. Dublin, is returned by Mr. T. Bateman as 1·343 inches on 16 days. The mean temperature in the shade was 40·5°, the extremes being —highest, 52°; lowest, 27°.

At White Cross, Stillorgan, Co. Dublin, 2·378 inches of rain fell on 11 days, ·960 inch being measured on the 16th and ·590 inch on the 15th.

In Cork the rainfall was, according to Mr. W. Miller, 3·46 inches on 18 days, an amount which was 0·54 inch below the average. In 1903, 8·07 inches of rain fell on 26 days, and in 1904, 5·30 inches on 26 days. On the 28th the barometer rose to 31·04 inches. This was the fifth time since 1750 that atmospheric pressure reached 31 inches in Cork. The dates were—December 25, 1778; January 9, 1825; January 18, 1882; January 9, 1896; and January 28, 1905.

At the Railway Hotel, Recess, Connemara, Co. Galway, the rainfall was 5·832 inches on 21 days, the maximal fall in 24 hours being ·850 inch on the 5th. The observer, Mr. A. A. Smith, remarks that January, 1905, was an extremely wet month, with frequent heavy gales from S.W.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 44·2°, being 0·1° above the average for January during the previous 7 years, the extremes being—highest, 54·2° on the 8th; lowest, 29·5° on the 17th. At Bournemouth the mean was 40·3°, the extremes being —highest, 54° on the 8th; lowest, 26° on the 27th. The mean daily range of temperature was 7·9°; at Bournemouth it was 10·3°. The mean temperature of the sea at Sandycove bathing-place was 43·7°, being 1·1° below the average for the month during the previous 7 years. The mean relative humidity at 9 a.m. was 82 per cent., being the average for the month during the previous 4 years. The rainfall at Kingstown was 1·62 inches on 11 days; at Bournemouth it was 0·95 inch on 10 days. The total duration of bright sunshine was 62·1 hours, being 8·8 hours above the average for the month during the previous 4 years. It was 57·9 hours at the Ordnance Survey Office, Phœnix Park, 17·7 hours at Valentia, 40·0 hours at Parsonstown, and 41·9 hours at Southport. The reading of the barometer (corrected) at 9 p.m. on the 28th was 31·017, the highest on record at Kingstown during the previous 19 years, as appears by the record of the barograph.

FEBRUARY.—Like January, its predecessor, February was signalised by a high atmospheric pressure, and also by a high temperature for the time of year. Pressure was ·305 inch above the normal, and no less than ·670 inch above the value for February, 1904. The mean temperature also was 1·1° in excess, and 2·9° above that of last February, which was a cold month. These *plus* values would have been much more marked had not a cold spell set in on Saturday, the 18th, lasting to the end of the month, while a deep atmospheric depression brought the barometer down to 28·937 inches on the evening of the 26th, so reducing the excessive pressure of the month taken as a whole. The amount of cloud was relatively small, and sunshine was in excess.

The duration of bright sunshine was estimated at 97 hours, or a daily average of 3·5 hours, compared with 79·25 hours, or a daily average of 2·8 hours in 1902, 63·5 hours, or a daily average of 2·3 hours in 1903, and only 43·0 hours, or a daily average of 1·5 hours in 1904.

In Dublin the mean temperature (43·6°) was 1·1° above the average (42·5°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 42·4°. In the forty years ending with 1904, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1869 (M. T. = 46·7°) and in 1903 (M. T. = 47·5°). In 1901 the M.T. was 39·2°; in 1902, 39·3°; in 1903, 47·5°; and in 1904, 40·7°.

The mean height of the barometer was 30·160 inches, or 0·305 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·659 inches at 9 a.m. of the 21st, and fell to 28·937 inches at 9 p.m. of the 26th. The observed range of atmospheric pressure was, therefore, 1·722 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·4°, or 0·2° below the value for January, 1905. Using the formula, *Mean Temp. = Min. + (Max — Min.)* × ·50, the M. T. is 43·6°, compared with a thirty years' (1871-1900) average of 42·5°. On the 18th the thermometer in the screen rose to 55·8°—wind, W.S.W.; on the 20th it fell to 32·0°—wind, W.N.W. The minimum on the grass was 29·3°—also on the 20th.

The rainfall was ·750 inch, distributed over 12 days. The average rainfall for February in the thirty-five years, 1866-1900, inclusive, was 1·990 inches, and the average number of rainy days was 16. The rainfall, therefore, and the rainy days were much below the average. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879 also 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. In 1904, 3·312 inches fell on 17 days.

The atmosphere was foggy on the 7th and 24th. The amount of cloud—58·0 per cent.—was considerably below the average—66 per cent. At 9 p.m. it was only 55·9 per cent. High winds were noted on 10 days, and reached the force of a gale on 5 days—namely, the 1st, 18th, 19th, 26th, and 27th. Hail fell on the 19th, 26th, and 27th. Snow or sleet fell on the 19th, 22nd, and 27th. Lunar halos were seen on the 12th and 14th. A partial eclipse of the moon was well seen on the evening of the 19th.

The temperature reached or exceeded 50° in the screen on 10 days, and it fell to or below 32° on only one night, compared with as many as 18 nights in 1895. The minima on the grass were 32° or less on 10 nights, compared with every night in 1895. The thermometer never failed to rise to 40° in the screen. The highest minimum was 47·1° on the 9th.

In Dublin the rainfall up to February 28th, 1905, amounted to 2·647 inches on 26 days, compared with 5·735 inches on 50 days in 1900, 3·872 inches on 29 days in 1901, 3·362 inches on 22 days in 1902, 5·503 inches on 35 days in 1903, 5·847 inches on 36 days in 1904, and a thirty-five years' (1866-1900) average of 4·220 inches on 34 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. Maurice S. Moore, reports that the mean height of the barometer was 30·160 inches, the highest reading observed being 30·653 inches at 9 a.m. of the 21st, the lowest, 28·935 inches at 9 p.m. of the 26th. The mean temperature was 43·8°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 43·0°. Rain fell on 13 days to the amount of ·687 inch, ·173 inch being measured on the 25th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 84·9, giving a daily average of 3·0 hours. The corresponding figures for February, 1904, were 37·25 hours and 1·28 hours. The mean temperature of the soil at a depth of one foot was 42·3° at 9 a.m.; at a depth of 4 feet, it was 44·2° at 9 a.m.

The rainfall at Leeson Park, Dublin, is given by Dr. C. Joynt, F.R.C.P.I., as ·775 inch on 11 days, ·220 inch having been measured on the 25th.

At Cork, according to Mr. W. Miller, rain fell on 16 days to the amount of 1·42 inches, or 2·02 inches below the average for February. The heaviest fall in 24 hours was ·61 inch on the 25th. The rainfall of the first two months of 1905 has been 4·88 inches on 34 days.

At the Ordnance Survey Office, Phœnix Park, the rainfall was ·900 inch on 16 days, the maximal measurement in 24 hours being ·210 inch on the 25th.

At White Cross, Stillorgan, Co. Dublin, ·832 inch of rain fell on 14 days, ·280 inch being measured on the 25th and ·172 inch on the 6th. Since January 1, the rainfall equals 3·210 inches on 25 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 12 days to the amount of 1·07 inches, the greatest daily fall being ·43 inch on the 25th. In February, 1901, the rainfall was 1·55 inches on 10 days; in 1902, it was 2·76 inches on 11 days; in 1903, it was 2·95 inches on 15 days, and in 1904, 4·05 inches on 21 days. The temperature in the shade ranged from 54° on the 16th and 18th to 32° on the 20th. The mean temperature in the screen was 43·6°, compared with 39·0° in 1902, 47·1° in 1903, and 40·4° in 1904.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was only ·650 inch on 9 days. The heaviest fall in 24 hours was ·250 inch on the 25th. In February, 1900, the rainfall was 6·670 inches on 20 days; in 1901, 1·385 inches on 11 days; in 1902, 2·590 inches on 8 days; in 1903, 2·870 inches on 14 days; and in 1904, 2·957 inches on 19 days. The total fall to February 28th, 1905, inclusive, was 1·655 inches on 20 days, compared with 5·692 inches on 36 days in 1904, 6·170 inches on 29 days in 1903, 4·450 inches on 17 days in 1902, 5·420 inches on 27 days in 1901, 10·436 inches on 44 days in 1900, 8·610 inches on 42 days in 1899, 3·980 inches on 29 days in 1898, 5·190 inches on 37 days in 1897, and only 1·940 inches on but 17 days in 1896.

The rainfall at Cloneevin, Killiney, Co. Dublin, as observed by Mr. Robert O'B. Furlong, C.B., amounted to ·79 inch on 14 days, compared with 2·35 inches on 12 days in 1902, 2·08 inches on 14 days in 1903, and 3·56 inches on 20 days in 1904. The average rainfall for February during 20 years, 1885-1904, at this station is 1·891 inches on 14 days. The greatest rainfall in 24 hours was ·28 inch on the 25th. Since January 1 the rainfall was 3·08 inches on 26 days, compared with 5·98 inches on 37 days in 1904, 4·90 inches on 35 days in 1903, 3·97 inches on 24 days in 1902, 4·39 inches on 28 days in 1901, 7·23 inches on 48 days in 1900, 6·28 inches on 36 days in 1899, 3·32 inches on 29 days in 1898, 4·31 inches on 38 days in 1897, and 1·64 inches on 19 days in 1896.

Dr. B. H. Steede reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was ·848 inch on 10 days, compared with 1·296 inches on 11 days in 1901, 2·923 inches on 10 days in 1902, 3·096 inches on 16 days in 1903, and 4·408 inches on 24 days in 1904. The maximal fall in 24 hours was ·360 inch on the 25th. Up to February 28th, the rainfall at Newcastle amounted to 2·175 inches on 21 days, compared with 4·837 inches on 25 days in the corresponding period of 1901, 4·589 inches on 22 days in 1902, 7·416 inches on 35 days in 1903, and 7·718 inches on 42 days in 1904. At this Second Order Station the screened thermometers fell to 32·9° on the 17th, having risen to 57·0° on the 18th.

From the Railway Hotel, Recess, Connemara, Co. Galway, Mr. A. A. Smith reports that the rainfall was 3·119 inches on 17 days, compared with 7·710 inches on 23 days in 1904, 5·890 inches on 22 days in 1903, 3·196 inches on 12 days in 1902, and only 1·748 inches on 11 days in 1901. The maximal fall in 24 hours was ·790 inch on the 26th. The month was generally stormy.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 44·5°, being 2·3° above the average for the month during the previous 7 years, the extremes being—highest, 56·7° on the 18th; lowest, 32·5° on the 20th. At Bournemouth the mean was 43·5°, the extremes being—highest, 55° on the 15th; lowest, 31° on the 20th. The mean daily range of temperature was 6·6°; at Bournemouth it was 10°. The mean temperature of the sea at Sandycove bathing-place, was 42·9°, being 0·2° above the average for the month during the previous 7 years. The mean relative humidity was 76·5 per cent., being 2 per cent. below the average for the month during the previous 4 years. The rainfall at Kingstown was 0·71 inch on 13 days, being 1·58 inches below the average for the month during 15 previous years (1873-83) and (1901-04); at Bournemouth it was 0·84 inches on 9 days. The total duration of bright sunshine at Kingstown was 106·8 hours, being as much as 57·3 hours above the average for the month during the previous 4 years, as compared with 96·9 hours at Ordnance Survey Office, Phœnix Park, 76·5 hours at Valentia, 87·5 hours at Parsonstown, 89·2 hours at Southport, 89·4 hours at Hastings, and 93 hours at Bournemouth.

March.—March, 1905, was unsettled, squally, and showery, with a preponderance of south-westerly and westerly winds, so that the mean temperature was 1·6° in excess of the average. The precipitation in Dublin was heavy on the 14th and 23rd—about seven-tenths of an inch on each occasion. On the latter date it consisted principally of sleet and snow, the Dublin and Wicklow mountains being deeply covered and looking beautiful on the 24th under a deep blue sky and in brilliant sunshine. Hail fell frequently—as is usual in March—on as many as 9 days. Cloudiness was much in defect, the percentage at 9 a.m. and 9 p.m. combined being only 47·4, and falling at 9 p.m. to 41·9. Naturally from this, sunshine was in excess, as stated below. But the most striking episode in the month was the extreme reduction of atmospheric pressure in a cyclone which was central off the Donegal coast on the morning of Wednesday the 15th. At 8 a.m. of that day the barometer read 27·92 inches at Malin Head, whereas it stood more than 2 inches higher at Haparanda on the Gulf of Bothnia (30·04 inches). In Dublin the mercury had been down to 28·077 inches about 5 a.m.—a reading more than half an inch below the minimum noted in the hurricane of February 26 and 27, 1903, and the lowest recorded in Dublin since December 8, 1886, when, however, the phenomenally low reading of 27·758 inches was registered.

The duration of bright sunshine was estimated at 159 hours, compared with 101 hours in 1904, 110·75 hours in 1903, 94 hours in 1902, 132·5 hours in 1901, and only 84 hours in 1900. The daily average of bright sunshine was 5·1 hours, compared with 3·26 hours in 1904, 3·57 hours in 1903, 3 hours in 1902, 4·27 hours in 1901, and only 2·7 hours in 1900.

In Dublin the arithmetical mean temperature (45·2°) was 1·6° above the average (43·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 43·6°. In the forty years ending with 1904, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1903 (M. T. = 48·1°). In 1904 the M. T. was 42·9°.

The mean height of the barometer was 29·616 inches, or 0·300 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·274 inches at 9 p.m. of the 2nd and fell to 28·077 inches about 5 a.m. of the 15th. The observed range of atmospheric pressure was, therefore, 2·197 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·6°. Using the formula, *Mean Temp. = Min.* + (*Max.—Min.*) × ·485, the M. T. becomes 45·0°. The arithmetical mean of the maximal and minimal readings was 45·2°, compared with a thirty years' (1871-1900) average of 43·6°. On the 22nd the thermometer in the screen rose to 61·4°—wind, S.E.; on the 3rd the temperature fell to 29·7°—wind, E.S.E. The minimum on the grass was 25·0°, also on the 3rd.

The rainfall was 2·731 inches, distributed over 20 days. The average rainfall for March in the thirty-five years, 1866-1900, inclusive, was 1·950 inches, and the average number of rainy days was 16·0. The rainfall, therefore, and the rainy days were much above the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893. In 1900, only ·963 inch fell on 13 days. In 1904 the rainfall was 2·091 inches on 19 days.

The atmosphere was foggy in the city on the 2nd, 3rd, 21st and 22nd. High winds were noted on 14 days, reaching the force of a gale on 5 occasions—namely, the 7th, 9th, 11th, 14th, and 15th. Snow or sleet occurred on the 9th and 23rd; hail also fell on the 7th, 9th, 11th, 14th, 15th, 27th, 28th, 29th, and 30th. Temperature reached or exceeded 50° in the screen on 20 days, compared with 10 days in 1904, 18 days in 1903, 23 days in 1902, only 6 days in 1901, only 5 days in 1900, 19 days in 1899, 9 in 1898, 14 in 1897, and 21 in 1896. It fell to 32° in the screen on one night—the 3rd—and on the 22nd it rose to 61·4°. The minima on the grass were 32° or less on 8 nights, compared with 13 nights in 1904, 4 nights in 1903, 5 nights in 1902, 11 nights in 1901, 14 nights in 1900, 13 in 1899, 15 in 1898, 9 in 1897, and 8 in 1896.

The rainfall in Dublin during the three months ending March 31st amounted to 5·378 inches on 46 days, compared with 7·938 inches on 55 days in 1904, 9·126 inches on 61 days in 1903, 5·114 inches on 43 days in 1902, 5·656 inches on 46 days in 1901, 6·698 inches on 63 days in 1900, only 1·650 inches on but 32 days in 1899, and a thirty-five years' (1866-1900 inclusive) average of 6·710 inches on 50·0 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·615 inches, the highest reading observed being 30·270 inches at 9 a.m. of the 3rd, the lowest, 28·320 inches at 9 a.m. of the 15th. The mean temperature was 45·3°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 44·5°. Rain fell on 20 days to the amount of 2·816 inches, ·816 inch being measured on the 23rd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 146·0, giving a daily average of 4·7 hours. The corresponding figures, for March, 1904, were 89·75 hours and 2·9 hours.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, 4·005 inches of rain fell on 21 days. The corresponding figures for March, 1900, were 1·320 inches of rain on 14 days; for 1901, 1·840 inches on 14 days; for 1902, 1·660 inches on 17 days; for 1903, 5·050 inches on 25 days, and for 1904, 2·415 inches on 17 days. The maximal fall on 24 hours was 1·340 inches on the 23rd. The total rainfall since January 1, 1905, equals 5·660 inches on 41 days, compared with 11·756 inches on 58 days in the first quarter of 1900, 7·260 inches on 41 days in the same period of 1901, 6·110 inches on 34 days in 1902, 11·220 inches on 54 days in 1903, and 8·107 inches on 53 days in 1904.

Dr. B. H. Steede, M.D., D.P.H., reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 4·212 inches on 23 days, compared with 2·605 inches on 17 days in 1904, 6·186 inches on 30 days in 1903, 1·417 inches on 19 days in 1902, 1·798 inches on 14 days in 1901, and ·892 inch on 12 days in 1900. On the 23rd 1·100 inches fell, and on the 14th ·810 inch. The total rainfall at this station from January 1 to March 31, inclusive, was 6·387 inches on 44 days, compared with 10·323 inches on 59 days in the first quarter of 1904, 13·602 inches on 65 days in the first quarter of 1903, 6·006 inches on 41 days in the same period of 1902, 6·635 inches on 39 days in that of 1901, and 10·631 inches on 57 days in that of 1900. The extremes of temperature were—highest, 57·5° on the 22nd; lowest, 32·2° on the 3rd.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 28 days to the amount of 3·31 inches, compared with 2·20 inches on 13 days in March, 1901, 1·98 inches on 18 days in 1902, 4·53 inches on 28 days in 1903, and 2·50 inches on 21 days in 1904. The greatest daily rainfall was ·86 inch on the 14th. The temperature in the shade ranged from 59° on the 22nd to 30° on the 3rd. The mean shade temperature was 45·0°, compared with

41·2° in 1901, 46·4° in 1902, 45·7° in 1903, and 44·1° in 1904. Since January 1st, 1905, the rainfall at this station amounts to 6·76 inches on 56 days, compared with 6·71 inches on 40 days in the first quarter of 1901, 7·02 inches on 43 days in 1902, 11·36 inches on 62 days in 1903, and 10·14 inches on 67 days in 1904.

At White Cross, Stillorgan, Miss Muriel O'Sullivan measured 3·188 inches of rain on 23 days, the maximum in 24 hours being ·850 inch on the 14th. In the snow storm of the 23rd, ·780 inch was collected in the rain gauge. At this station the rainfall in the first quarter of 1905 equals 6·398 inches on 48 days.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park, Dublin, at 2·810 inches on 20 days, ·730 inch being measured on the 14th, and ·715 inch on the 23rd.

The rainfall at Cloneevin, Killiney, Co. Dublin, as returned by Mr. Robert O'B. Furlong, C.B., was 3·42 inches on 21 days, as compared with 2·01 inches on 17 days in 1904, 3·40 inches on 29 days in 1903, 1·50 inches on 21 days in 1902, 1·57 inches on 17 days in 1901, ·94 inch on 14 days in 1900, and a twenty years' (1885-1904) average of 1·807 inches on 16·4 days. The maximum in the 20 years was 3·59 inches in 1888, the minimum was ·26 inch in 1893. The heaviest fall in 24 hours was ·98 inch on the 23rd. At this station the total rainfall since January 1 was 6·50 inches on 47 days, compared with a fall of 8·17 inches on 62 days in the first quarter of 1900, 5·96 inches on 45 days in that of 1901, 5·47 inches on 45 days in 1902, 8·30 inches on 64 days in 1903, and 7·99 inches on 54 days in 1904. Snow or sleet or hail was noticed on the 9th, 15th, and 23rd. Lightning was seen on the 14th.

Mr. T. Bateman returns the rainfall at the Green, Malahide, Co. Dublin, as 3·473 inches on 24 days, and the extremes of temperature in the shade as—highest, 57°; lowest, 27°; the mean temperature being 42·7°.

Mr. W. Miller registered 6·98 inches of rain at Wellesley Terrace, Cork, on 25 days. The greatest fall in 24 hours was 1·17 inches on the 19th. The rainfall was 4·52 inches in excess of the average for March, and had not been equalled in this month during the last 27 years at least.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 10·245 inches of rain fell there on 28 days in March, 1·20 inches being measured on the 10th and again on the 19th, and 1·10 inches on the 14th, when a "great storm" occurred. In the seven days from the 10th to the 16th, inclusive, the fall was 4·81 inches, ·55 inch falling in 3½ hours on the 12th. In January, 1905, 4·18 inches of rain fell on 20 days, including ·96 inch on the 14th; in February, the measurement was 2·75 inches on 15 days, including 1·04 inches on the 25th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 24 days to the amount of 2·570 inches, of which ·620 inch was measured on the 14th. The duration of bright sunshine was 156·7 hours, the greatest daily measurement being 11·0 hours on the 24th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 45·8°, being 2° above the average for March during the previous 7 years, the extremes were—highest 56° on the 22nd and 28th; lowest, 29·5° on the 3rd. At Bournemouth the mean was 45·5°, the extremes being —highest, 58° on the 20th; lowest, 30° on the 4th. The average mean temperature at Kingstown during the past five winter months, November, December, January, February and March, was 45·0°, whereas that for the South Coast of England, from Portland Bill to Dungeness, was only 43·6°, that for Bournemouth something lower, 43·5°. Now that the vernal equinox has passed this relative condition of temperature it is becoming reversed as the summer solstice approaches, and from the latter period the summer heat on the South Coast of England becomes great, and at times very oppressive, especially so to invalids, while at Kingstown it will be comparatively mild. From a paper appearing in the number of this Journal for December, 1903, and from subsequent records, it can be stated that this relative condition of temperature has prevailed during the previous 7 years. The mean daily range of temperature at Kingstown was 11·3°, at Bournemouth it was 12·0°. The mean temperature of the sea at Sandycove bathing-place was 42·6° being 0·6° above the average for the month during the previous 7 years. The relative humidity was 76·5 per cent., being 0·5 per cent. below the average for the month during the previous 4 years. The rain-fall at Kingstown was 2·74 inches on 22 days, of which 0·92 inch was measured on the 23rd; at Bournemouth it was 4·14 inches on 22 days. During the cyclone which occurred on the 15th the Robinson anemometer on the East Pier recorded a maximum velocity of 60 miles, counted 48 miles, between the previous midnight and 1 a.m., as compared with a maximum velocity of 90 miles, counted 66 miles, from 3.30 a.m. to 4.30 a.m. during the cyclone on February 27th, 1903. The total duration of bright sunshine was 159·5 hours, as compared with 156·7 at the Ordnance Survey Office, Phœnix Park, 122 hours at Valentia, 151·6 hours at Parsonstown, 155·4 hours at Southport, 137·2 hours at Bournemouth, and 130 hours at St. Leonards.

APRIL.—A dull, cold, unsettled and showery month. On the 18th hail, sleet and snow fell heavily, the Dublin and Wicklow Mountains being covered to a considerable depth. The succeeding Eastertide, though occurring late in the month, was very cold. On the 30th a downpour of rain occurred in Dublin in connection with a very deep atmospheric depression. The percentage of cloud at 9 a.m. was 74·7, and at 9 p.m. 71.0, the mean being 72·9. Corresponding to the cloudiness, bright sunshine was sadly deficient, only 107·75 hours against 159 hours in March, and compared with 205 hours in April, 1901, 199·5 hours in 1902, 137·5 hours in 1903, and 175·5 hours in 1904. The daily average duration of sunshine was 3·6 hours.

In Dublin the arithmetical mean temperature (46·8°) was 0·8° below the average (47·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 46·1°. In the forty years ending with 1904, April was coldest in 1879 (the cold year) (M. T. = 44·5°), and warmest in 1893 (M. T. = 51·4°).

The mean height of the barometer was 29·811 inches, or 0·039 inch below the average value for April—namely, 29·850 inches. The mercury rose to 30·234 inches at 9 a.m. of the 22nd, and fell to 28·877 inches at 9 p.m. of the 30th. The observed range of atmospheric pressure was, therefore, 1·357 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46·1°, or 2·5° above the value for March, 1905. Using the formula, *Mean Temp.* = *Min.* + (*Max.* —*Min.*) × ·476, the value is 46·5°, or 0·8° below the average mean temperature for April, calculated in the same way, in the thirty years, 1871-1900 inclusive, (47·3°). The arithmetical mean of the maximal and minimal readings was 46·8°, compared with a thirty years' (1871-1900, inclusive) average of 47·6°. On the 14th, and again on the 27th, the thermometer in the screen rose to 59·1°—wind, S. and S. W.; on the 8th the temperature fell to 30·0°—wind, calm. The minimum on the grass was 25·1°, also on the 8th.

The rainfall was 2·466 inches, distributed over 25 days. The average rainfall for April in the thirty-five years, 1866-1900, inclusive, was 1·950 inches, and the average number of rainy days was 15. The rainfall, therefore, was in excess of the average, while the number of rainy days also much exceeded it. In 1877 the rainfall in April was very large—4·707 inches on 21 days. On the other hand, in 1873, only ·498 inch was measured on 8 days. In 1903, 1·050 inches fell on 17 days, and in 1904, 1·118 inches on 19 days.

Fog was observed on the 11th only. High winds were noted on as many as 15 days, but reached the force of a gale on the 5th only. Hail fell on the 18th, 19th, 23rd, and 24th; snow and sleet on the 18th. The temperature never rose to 60° in the screen. It failed to reach 50° on seven days. It fell to 30° in the screen on the 8th, and on five nights it fell to or below 32° on the grass. The mean lowest temperature on the grass was 37·3°, compared with 39·1° in 1904, 37·0° in 1903, 36·8° in 1902, 37·3° in 1901, 39·0° in 1900, and only 31·6° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 7·844 inches on 71 days, compared with 9·056 inches on 74 days in 1904, 10·176 inches on 78 days in 1903, 7·175 inches on 59 days in 1902, 6·520 inches on 58 days in 1901, 8·002 inches on 79 days in 1900, only 3·203 inches on 46 days in 1891, and a thirty-five years' average of 8·120 inches on 65 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Maurice S. Moore, returns the mean height of the barometer as 29·812 inches, the highest reading observed being 30·230 inches at 9 a.m. of the 22nd, the lowest, 28·884 inches at 9 p.m. of the 30th. The mean temperature was 46·3°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being also 46·3°. Rain fell on 26 days to the amount of 2·356 inches, ·608 inch being measured on the 30th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 105, giving a daily average of 3·5 hours. The corresponding figures for April, 1904, were 168 hours and 5·6 hours.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 2·835 inches on 18 days, compared with only ·930 inch on 14 days in 1904, 1·165 inches on 9 days in 1903, 3·105 inches on 14 days in 1902, and 2·800 inches on 15 days in 1901. The heaviest fall in 24 hours was ·690 inch on the 26th. The total rainfall in 1905, up to April 30th, was 8·495 inches on 59 days, compared with 9·037 inches on 68 days in 1904, 12·385 inches on 63 days in 1903, 9·215 inches on 48 days in 1902, 10·060 inches on 56 days in 1901, 13·191 inches on 70 days in 1900, and only 5·686 inches on 50 days in 1896.

According to Mr. Robert O'Brien Furlong, C.B., at Cloneevin, Killiney, Co. Dublin, 2·67 inches of rain fell on 22 days. The maximal fall in 24 hours was ·55 inch on the 26th. Hail or sleet fell on the 17th, 18th, and 23rd. The average rainfall in April of the twenty years, 1885-1904, was 1·774 inches on 14·4 days. Since January 1, 1905, 9·17 inches of rain fell at this station on 69 days, compared with 9·02 inches on 69 days in 1904, 9·67 inches on 76 days in 1903, 8·08 inches on 59 days in 1902, 7·62 inches on 59 days in 1901, and 9·23 inches on 77 days in 1900.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 3·14 inches on 24 days, compared with 1·48 inches on 18 days in 1904, 1·35 inches on 16 days in 1903, 2·63 inches on 16 days in 1902, and 1·19 inches on 12 days in 1901, the greatest daily rainfall being ·64 inch on the 30th. The mean shade temperature was 46·4°, compared with 48·3° in 1901, 46·6° in 1902, 45·9° in 1903, and 48·9° in 1904. The thermometric range was from 59° on the 27th to 31° on the 8th. Hail and sleet fell on the 18th.

Mr. T. Bateman, of the Green, Malahide, Co. Dublin, returns the rainfall at 1·773 inches on 22 days, and the shade mean temperature at 44·8°, the extremes being—highest, 60°; lowest, 26°.

In Cork, according to Mr. W. Miller, the rainfall amounted to 3·27 inches on 20 days, ·53 inch being measured on the 24th. Since January 1, 1905, 14·95 inches of rain have fallen in Cork on 79 days, against an average for the first four months of the year of 12·78 inches on 68 days.

The Rev. Arthur Wilson, M.A., writes from the Rectory, Dunmanway, Co. Cork, to the effect that 4·55 inches of rain fell there on 24 days, the greatest falls in 24 hours being ·71 inch on the 24th, ·66 inch on the 14th, and ·60 inch on the 29th.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 2·790 inches on 23 days, the largest amount recorded in 24 hours being ·770 inch on the 30th.

The rainfall recorded by Miss Muriel O'Sullivan at White Cross, Stillorgan, was 3·122 inches on 24 days; the maximum in 24 hours was ·730 inch on the 30th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 27 days to the amount of 2·290 inches, the greatest measurement in 24 hours being ·645 inch on the 30th. The total amount of bright sunshine at this station was 101·1 hours, the most in one day being 10·7 hours on the 8th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, Co. Dublin, reports that the mean temperature at that health resort was 46·7°, being 1·5° below the average for the month during the previous 7 years, the extremes were—highest, 58·7° on the 27th; lowest, 31·5° on the 8th. At Bournemouth the mean was 48·7°, the extremes being—highest, 59° on the 25th; lowest, 35° on the 18th and 21st. The daily range of temperature at Kingstown was 10·3°, at Bournemouth it was 12·3°. The relative humidity was 79 per cent., being 3 per cent. above the average for the month during the previous 4 years. The rainfall at Kingstown was 2·44 inches on 20 days, being 0·7 inch above the average for April during 15 years (1873-83) and (1901-04)—0·57 inch was registered on the 26th. At Bournemouth the rainfall was 1·69 inches on 18 days. The total duration of bright sunshine was 106·8 hours as compared with 101·1 hours at the Ordnance Survey Office, Phœnix Park, 75·5 hours at Valentia, 87·8 hours at Parsonstown, 126·6 hours at Southport, 118·8 hours at Hastings, and 106·3 at Bournemouth.

Errata in the Return for March, 1905.

The mean height of the barometer was 29·617 inches, or ·299 inch below the average pressure for the month of March. The foggy days were the 2nd, 3rd, 4th, and 21st. The thirty-five years' average rainfall of the first quarter of the year in Dublin is 6·170—not 6·710—inches. The Trinity College rainfall in March was 2·809 inches, not 2·816 inches.

MAY.—May, 1905, was characterised by a prevalence of winds from Polar quarters. Only in the last week did an equatorial air current assert itself. The polar winds depended on the persistent prevalence of an anticyclone to the north-westward of the British Isles. The month was very dry, sunny, and, accordingly, the mean temperature ranged above the normal, although for a few days after the 21st a serious plunge into winter weather was experienced. Of the total small rainfall (1·182 inches), as much as ·714 inch, or 60 per cent., fell on the 1st. Absolute drought prevailed from the 11th to the 24th inclusive. The estimated duration of bright sunshine was 225 hours, compared with 195·75 hours in 1904, 178·5 hours in 1903, 178·75 hours in 1902, and 302·25 hours in 1901. The daily mean duration of sunshine was 7·3 hours, compared with 6·3 hours in May, 1904.

In Dublin the arithmetical mean temperature (54·0°) was 1·9° above the average (52·1°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 53·2°. In the forty years ending with 1904, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1904 the M. T. was 53·0°.

The mean height of the barometer was 30·139 inches, or 0·159 inch above the corrected average value for May—namely, 29·980 inches. The mercury rose to 30·478 inches at 9 a.m. of the 13th, having fallen to 28·800 inches at 4 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1·678 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 53·2°, or 7·1° above the value for April, 1905—46·1°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.*) × ·47, the value is 53·5° or 1·8° above the average mean temperature for May, calculated in the same way, in the thirty years, 1871-1900, inclusive (51·7°). The arithmetical mean of the maximal and minimal readings was 54·0°, compared with a thirty years' average of 52·1°. On the 28th the thermometer in the screen rose to 70·9°—wind, S.S.W.; on the 4th the temperature fell to 36·9°—wind, N.N.W. The minimum on the grass was 32·1°, also on the 4th.

The rainfall amounted to 1·182 inches, distributed over 10 days. The average rainfall for May in the thirty-five years, 1866-1900, inclusive, was 2·020 inches, and the average number of rainy days was 15. The rainfall and the rainy days were, therefore, both below the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 on 7 days. In 1904, 2·685 inches fell on 18 days.

A solar halo appeared on the 7th, and again on the 31st. High winds were noted on 6 days, but never attained the force of a gale. Hail fell on the 3rd. There was a slight fog in the evening of the 16th.

During the month the thermometer did not fall below 32° in the screen or on the grass. The mean minimal temperature on the grass was 42·5°, compared with 42·6° in 1904, 44·3° in 1903, 40·3° in 1902, 41·7° in 1901, 41·6° in 1900, 40·6° in 1899, 42·9° in 1898, 40·9° in 1897, 43·1° in 1896, 41·8° in 1895, and 37·6° in 1894. The maximum reached or exceeded 60° on 19 days, but never fell short of 50°. Once it exceeded 70°—namely, on the 28th, when the reading was 70·9°.

The rainfall in Dublin during the five months ended May 31st amounted to 9·026 inches on 81 days compared with 11·741 inches on 92 days in 1904, 12·560 inches on 95 days in 1903, 9·973 inches on 81 days in 1902, 7·724 inches on 67 days in 1901, 9·921 inches on 92 days in 1900, 9·652 inches on 87 days in 1899, 10·568 inches on 84 days in 1898, 10·693 inches on 93 days in 1897, 5·971 inches on 70 days in 1896, and a thirty-five years' average of 10·140 inches on 80 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Maurice S. Moore, returns the mean height of the barometer as 30·141 inches, the highest reading observed being 30·488 inches at 9 a.m. of the 13th, the lowest, 28·983 inches at 9 a.m. of the 1st. The arithmetical mean temperature was 53·1°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being also 53·1°. Rain fell on 8 days to the amount of 1·118 inches, ·710 inch being measured on the 1st. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 215·7, giving a daily average of 7·0 hours. The corresponding figures for May, 1904, were 192·5 hours and 6·2 hours.

At Knockdolian, Greystones, Co. Wicklow, the rainfall, measured by Mr. R. Cathcart Dobbs, J.P., was 1·116 inches, distributed over 8 days—·580 inch falling on the 1st. The total fall since January 1st, 1905, equals 9·611 inches on 67 days, compared with 12·027 inches on 84 days in 1904, 15·655 inches on 79 days in 1903, 11·750 inches on 68 days in 1902, 11·205 inches on 65 days in 1901, 16·381 inches on 84 days in 1900, 15·475 inches on 86 days in 1899, 12·445 inches on 78 days in 1898, 14·120 inches on 90 days in 1897, and 5·716 inches on 52 days in 1896.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, as 1·42 inches on 11 days, compared with 2·46 inches on 18 days in 1904, 2·86 inches on 18 days in 1903, 3·26 inches on 22 days in 1902, and 1·09 inches on 10 days in 1901. The greatest daily measurement was ·96 inch on the 1st. The temperature in the shade ranged from 75° on the 30th to 37° on the 5th and 23rd. The mean temperature of the month was 54·5°, compared with 53·3° in 1904, 53·1° in 1903, 50·5° in 1902, and 52·6° in 1901.

Dr. B. H. Steede, M.D., reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall for the month was ·892 inch on 7 days, ·340 inch being registered on the 1st, and ·230 inch on the 28th. Since January 1st, 1905, 9·615 inches of rain have fallen at this station on 74 days. The highest temperature in the shade was 65·0° on the 18th, and the lowest was 35·0° on the 23rd.

According to Mr. Robert O'B. Furlong, C.B., the rainfall at Cloneevin, Killiney, was 1·83 inches on 9 days, compared with 2·48 inches on 15 days in 1904, 2·54 inches on 15 days in 1903, 2·58 inches on 21 days in 1902, and 1·20 inches on 10 days in 1901. The maximal fall in 24 hours was 1·13 inches on the 1st. The average rainfall in May at this station during the 20 years, 1885-1904, inclusive, was 2·107 inches on 13·8 days. Since January 1st, 1905, 11·00 inches of rain have fallen at Cloneevin on 78 days.

The rainfall recorded by Miss Muriel O'Sullivan, at White Cross, Stillorgan, was 1·660 inches on 9 days; the maximum in 24 hours was 1·110 inches on the 1st.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 1·405 inches on 10 days, the largest amount recorded in 24 hours being ·870 inch on the 1st.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 9 days to the amount of 1·243 inches, the greatest measurement in 24 hours being ·675 inch on the 1st. The total amount of bright sunshine was 225·6 hours, the largest daily amount being 14·5 hours on the 18th.

Mr. T. Bateman, of the Green, Malahide, Co. Dublin, returns the rainfall at 1·283 inches on 10 days, and the shade mean temperature at 51·5°, the extremes being—highest, 69°; lowest, 33°.

At Cork Mr. Wm. Miller returns the rainfall at 0·90 inch on 9 days, or 1·28 inches below the average. The greatest day's rainfall was 0·27 inch on the 27th. Up to May 31st, the rainfall of 1905 in Cork amounted to 15·87 inches on 88 days, or 0·91 inch above the average.

The Rev. Arthur Wilson, M.A., writes from the Rectory, Dunmanway, Co. Cork, to the effect that 1·805 inches fell there on 12 days, the greatest fall in 24 hours being 0·420 inch on the 27th. There was no rain after the 10th until the 25th, and the rainfall during the first twenty-four days was only ·365 inch, of which ·180 inch fell on the 1st and ·130 on the 10th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, Co. Dublin, reports that the mean temperature at that station was 53·0°, being 1·4° above the average for May during the previous 7 years. The extremes were—highest, 68·7° on the 29th; lowest, 36·0°, on the 23rd. At Bournemouth the mean was 54·3°, the extremes being—highest, 75° on the 30th; lowest, 35° on the 23rd. From these particulars it will be seen that the mean temperature at Bournemouth has already become higher than that at Kingstown. It will remain higher during all the summer, the heat meanwhile becoming considerable, and at times very oppressive at Bournemouth, while at Kingstown it will be comparatively cool. The range of temperature was 13·5°, at Bournemouth it was as much as 20·1°. The mean relative humidity was 68 per cent., being 7 per cent. less than the average for this month during the previous 4 years. The total rainfall was 1·62 inches on 9 days, of which amount 1·15 inches fell on the 1st; at Bournemouth the rainfall was 0·45 inch on 7 days. The total duration of bright sunshine was 234·8 hours, compared with 225·6 hours at the Ordnance Survey Office, Phœnix Park, 262 hours at Valentia, 216·3 hours at Parsonstown, 230·7 hours at Southport, and 287·4 hours at Hastings.

JUNE.—June, 1905, was a beautiful and in all respects a favourable month. A moderate rainfall was distributed over some 11 days. It was, therefore, a dry month; it was also bright, with a large preponderance of N.E. and E. winds. The only heavy rains in Dublin were those of the 16th—which were accompanied by thunder—and of the 18th, ·361 inch in the City, but ·913 inch at Stillorgan. The mean temperature was considerably above the average, and a very warm period occurred from the 21st to the 27th inclusive, the daily maxima all being above 70°. The amount of cloud was 61·2 per cent. at 9 a.m. and 9 p.m. The estimated duration of bright sunshine was 237·5 hours, or a daily average of 7·9 hours.

In Dublin the arithmetical mean temperature (59·6°) was above the average (58·0°) by 1·6°; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58·4°. In the forty years ending with 1904, June was coldest in 1882 (M. T. = 55·8°) and 1879 ("the cold year") (M. T. = 55·9°). It was warmest in 1887 (M. T. = 62·3°); in 1896 (M. T. = 61·4°); and in 1899 (M. T. = 61·3°). In 1904 the M. T. was 57·8°.

The mean height of the barometer was 29·951 inches, or 0·034 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·360 inches at 9 p.m. of the 22nd, and fell to 29·658 inches at 9 a.m. of the 17th, and again at 9 p.m. of the 28th. The observed range of atmospheric pressure was, therefore, 0·702 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58·4°, or 5·2° above the corresponding M.T. for May, 1905. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.*) × ·465, the value was 59·1°, or 1·6° above the average mean temperature for June, calculated in the same way, in the thirty years, 1871-1900, inclusive (57·5°). The arithmetical mean of the maximal and minimal readings was 59·6°, compared with a thirty years' average of 58·0°. On the 26th the thermometer in the screen rose to 77·0°—wind, E. N. E.; on the 5th the temperature fell to 46·2°—wind, N.W.; on the 11th also the minimum was 46·2°—wind, N.E. The minimum on the grass was 41·0° on the 5th.

The rainfall amounted to 1·175 inches on 11 days. The average rainfall for June in the thirty-five years, 1866-1900, inclusive, was 1·920 inches, and the average number of rainy days was 15. The rainfall, therefore, and also the rainy days were considerably below average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879, also, 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days. In 1887 the rainfall was only ·252 inch, distributed over 5 days. In 1904, 1·076 inches fell on 10 days.

High winds were noted on only 4 days, but reached the force of a gale on the 20th and 21st. Solar halos were seen on the 9th, 15th, 17th and 20th. Temperature reached or exceeded 70° in the screen on 7 days—the 21st and 6 following days—compared with 4 days in 1904, 2 days in 1903, only 1 day in 1901, and 8 days in 1902. Thunder was heard on the evening of the 16th. The atmosphere was foggy on the 23rd and 26th.

The rainfall in Dublin during the six months ending June 30th amounted to 10·201 inches on 92 days, compared with 12·817 inches on 102 days in 1904, 15·054 inches on 108 days in 1903, 12·344 inches on 98 days in 1902, 9·352 inches on 80 days in 1901, 13·090 inches on 114 days in 1900, 11·295 inches on 95 days in 1899, 12·115 inches on 98 days in 1898, 13·950 inches on 113 days in 1897, 7·854 inches on 84 days in 1896, only 6·741 inches on 67 days in 1887, and a thirty-five years' average of 12·060 inches on 95 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Maurice S. Moore, returns the mean height of the barometer as 29·953 inches, the highest reading observed being 30·363 inches at 9 p.m. of the 22nd, the lowest, 29·657 inches at 9 p.m. of the 18th. The arithmetical mean temperature was 58·4°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 58·2°. The thermometer rose to 74·8° in the shade on the 26th, having fallen to 45·6° on the 11th, when the grass minimum was 36·1°. Rain fell on 10 days to the amount of 1·132 inches, ·360 inch being measured on the 18th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 217·6, giving a daily average of 7·3 hours. The corresponding figures for June, 1904, were 231·5 hours and 7·7 hours. The temperature of the earth at a depth of one foot ranged from 55·5° on the 6th, to 64·4° on the 27th, the mean being 59·4°. The corresponding figures at a depth of four feet were—lowest, 52·9° on the 1st and 2nd; highest, 57·3° on the 30th; mean, 54·6°.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·500 inches on 10 days, compared with 3·341 inches on 16 days in 1902, 1·785 inches on 11 days in 1903, and 2·280 inches on 10 days in 1904. The heaviest rainfall in 24 hours was ·370 inch on the 19th, besides which ·320 inch fell on the 18th. The total fall since January 1 has been 11·111 inches on 77 days, compared with 14·307 inches on 94 days in the first six months of 1904, 17·440 inches on 90 days in 1903, 15·091 inches on 84 days in 1902, 13·670 inches on 75 days in 1901, 18·191 inches on 105 days in 1900, 19·510 inches on 95 days in 1899, 13·500 inches on 88 days in 1898, 18·125 inches on 106 days in 1897, and 7·356 inches on 61 days in 1896.

At the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, Dr. B. H. Steede registered a rainfall of 2·051 inches on 13 days. The maximal fall in 24 hours was ·430 inch on the 19th, ·330 inch having been measured on the 18th, and ·340 inch on the 14th. The total rainfall from January 1 to June 30 inclusive was 11·666 inches on 87 days. The screened thermometers at this station rose to 72·1° on the 23rd, having fallen to 43·0° on the 4th.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 1·51 inches on 12 days, compared with 1·22 inches on 14 days in 1904, 1·54 inches on 12 days in 1903, 3·08 inches on 19 days in 1902, and 1·71 inches on 13 days in 1901. The greatest daily fall was ·54 inch on the 18th. The mean shade temperature was 60·0°. The thermometric range was from 46° on the 9th to 83° on the 21st.

The rainfall recorded at Cloneevin, Killiney, Co. Dublin, by Mr. R. O'B. Furlong, C.B., was 1·56 inches on 11 days. The maximal fall in 24 hours was ·51 inch on the 18th. The average rainfall in June in the 20 years (1885-1904) was 1·807 inches on 13·1 days. The total fall at Cloneevin since January 1, 1905, amounts to 12·56 inches on 89 days.

Mr. T. Bateman reports that the rainfall at the Green, Malahide, was 1·41 inches on 10 days; and that the mean shade temperature was 58·4°, the extremes being—highest, 76°; lowest, 43°.

Dr. C. Joynt returns the rainfall at 21 Leeson Park, Dublin, as 1·215 inches on 10 days, ·410 inch having been recorded on the 18th, and ·310 inch on the 16th.

At White Cross, Stillorgan, Co. Dublin, Miss Muriel O'Sullivan registered a rainfall of 2·049 inches on 10 days—the largest measurement in 24 hours being ·913 inch on the 18th.

The Rev. Arthur Wilson, M.A., reports a rainfall of 4·31 inches at the Rectory, Dunmanway, Co. Cork. From the 2nd to the 13th of June only ·08 inch of rain fell, but on the other hand ·75 inch was measured on the 18th, 1·02 inches on the 19th, ·64 inch on the 20th, and 1·00 inch on the 28th.

Mr. W. Miller returns the rainfall at Wellesley-terrace, Cork, at 2·42 inches on 13 days—this amount falling short of the average for June by ·27 inch. The greatest rainfall in 24 hours was ·52 inch on the 19th. The rainfall of the first six months of 1905 in Cork was 18·29 inches on 101 days, or ·29 inch in excess of the average. The rainy days were 8 over the average for the half-year.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell in June on 11 days to the total amount of 1·075 inches, ·325 inch being registered on the 18th. The duration of bright sunshine was 217·1 hours, the most in one day being 14·2 hours on the 14th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 59·6°. This is the highest mean temperature for June during 19 previous years (1873-83 and 1898-1904); it is 3·3° above the average, the next highest mean being 58·9° for June, 1873. The extremes were—highest, 74·7° on the 26th; lowest, 47·5° on the 4th and 12th. At Bournemouth, the mean was 59·7°, the extremes being—highest, 79°, on the 28th; lowest, 46°, on the 7th. The mean daily range was 15·1°, at Bournemouth it was 14·1°. The mean relative humidity was 75 per cent. The mean temperature of the sea at Sandycove bathing-place was 54·6°, being 0·5° below the average for the month during the previous 7 years. The total rainfall was 1·58 inches on 9 days, at Bournemouth it was 3·38 inches on 16 days, and at Dungeness it amounted to 5·92 inches on 16 days. The total rainfall for the first 6 months of 1905 at Kingstown was 10·71 inches on 83 days, at Bournemouth it was 11·46 inches on 82 days. The total duration of bright sunshine was 226·7 hours, being 53·6 above the average for June during the previous 4 years, as compared with 217·1 hours at the Ordnance Survey Office, Phœnix Park, 207 hours at Valentia, 190·6 hours at Parsonstown, 240·8 hours at Southport, 187·6 hours at Hastings, and 175·9 hours at Bournemouth.

July.—A very warm and generally favourable month, rain falling frequently indeed, but in Dublin on no occasion heavily, and in this city and its neighbourhood there was an entire absence of electrical disturbances. The rainfall was almost exclusively in the form of showers, and not a single wet day was observed. The amount of cloud was large—70 per cent. at 9 a.m.—but falling to 51 per cent. at 9 p.m. The dominant winds were W. and S.W. The duration of bright sunshine was estimated at 173·25 hours, or a daily average of 5·6 hours, compared with a twenty years' average (1881-1900) of 166·8 hours recorded at the Ordnance Survey Office, Phœnix Park.

In Dublin the arithmetical mean temperature (63·8°) was 3·5° above the average of the 30 years 1871-1900 (60·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 62·3°. In the forty years ending with 1904, July was coldest in 1879 ("the cold year") (M. T. = 57·2°). It was warmest in 1887 (M. T. = 63·7°); in 1868 ("the warm year") and in 1901 (M. T. = 63·5°). In 1900 the M. T. was 63·4°; in 1904 it was 61·6°. The July of the present year, therefore, constitutes a record for warmth.

The mean height of the barometer was 30·036 inches, or 0·121 inch above the corrected average value for July—namely, 29·915 inches. The mercury rose to 30·284 inches at 9 p.m. of the 3rd, and fell to 29·700 inches at 9 a.m. of the 29th. The observed range of atmospheric pressure was, therefore, only ·584 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 62·3°, or 3·9° above the value for June, 1905. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·465, the value was 63·3°, or 3·5° above the average mean temperature for July, calculated in the same way, in the thirty years 1871-1900, inclusive (59·8°). The arithmetical mean of the maximal and minimal readings was 63·8°, compared with a thirty years' average of 60·3°. On the 14th, the thermometer in the screen rose to 81·8°—wind, S.W.; on the 6th the temperature fell to 49·3°—wind, N.W. The minimum on the grass was 45·0° on the 4th and again on the 27th.

The rainfall was only ·821 inch, distributed, however, over 17 days. The average rainfall for July in the thirty-five years 1866-1900, inclusive, was 2·560 inches, and the average number of rainy days was 18. The rainfall, therefore, was much below the average, and the rainy days were slightly below the average. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869, the fall was only ·739 inch on 9 days; and in 1868, ·741 inch fell on but 5 days. In 1904, 1·088 inches fell on 15 days.

High winds were noted on 8 days, but never attained the force of a gale. Temperature reached or exceeded 70° in the screen on 17 days, compared with 10 days in July, 1904, and 7 days in July of both 1902 and 1903. The thermometer never failed to reach 60°. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888 the maximum for July was only 68·7°.

The atmosphere was foggy on the morning of the 19th.

The rainfall in Dublin during the seven months ending July 31st amounted to 11·022 inches on 109 days, compared with 13·905 inches on 117 days in 1904, 19·072 inches on 131 days in 1903, 15·507 inches on 115 days in 1902, 11·432 inches on 93 days in 1901, 17·609 inches on 129 days in 1900, 14·416 inches on 107 days in 1899, 13·060 inches on 106 days in 1898, 15·600 inches on 125 days in 1897, 13·328 inches on 102 days in 1896, 7·935 inches on 80 days in 1887, and a thirty-five years' average of 14·620 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·038 inches, the range of atmospheric pressure being from 30·286 inches at 9 p.m. of the 3rd to 29·699 inches at 9 a.m. of the 29th. The mean value of the readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 62·5°. The arithmetical mean of the daily maximal and minimal temperatures was 63·3°. The screened thermometers rose to 81·9° on the 14th, and fell to 49·0° on the 6th. On the 4th the grass minimum was 41·6° On the 14th the black bulb *in vacuo* rose to 138·7°. Rain fell on 17 days to the amount of ·776 inch, the greatest fall in 24 hours being ·098 inch on the 9th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 162·2 hours, of which 13·8 occurred on the 8th. In July, 1904, there were 201 hours of bright sunshine. The mean earth temperatures were—at 1 ft., 63·2°; at 4 ft., 58·6°. The one-foot thermometer ranged between 60·5° on the 4th and 66·3° on the 15th. The four-feet thermometer ranged from 57·5° on the 2nd to 59·5° on the 27th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, the rainfall was ·98 inch on 20 days. The maximal fall in 24 hours was ·18 inch, measured on the 9th. The mean temperature was 64·4°, the range being from 80° on the 13th and 14th to 51° on the 27th. In July, 1901, 2·65 inches of rain fell at this station on 11 days; in 1902, 4·27 inches on 91 days; in 1903, 3·66 inches on 24 days; and in 1904, 1·22 inches on 17 days.

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured ·908 inch of rain on 18 days, the largest amount which fell in 24 hours being ·139 inch on the 9th.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'Brien Furlong, C.B., reports that the rainfall in July was 1·03 inches on 15 days, compared with a twenty years' (1885-1904) average of 2·578 inches on 15·3 days. On the 10th the rainfall was ·24 inch. In July, 1904, only ·77 inch fell on 15 days; in 1903, 3·54 inches fell on 19 days; in 1902, 3·64 inches on 13 days; in 1901, 2·80 inches on 13 days; in 1900, 4·56 inches on 16 days; in 1899, 3·48 inches on 17 days; in 1898, ·84 inch on 7 days; in 1897, 1·28 inches on 10 days; in 1896, 6·72 inches on 20 days. Since January 1, 1905, 13·59 inches of rain have fallen on 104 days at this station, compared with 18·38 inches on 129 days in the corresponding 7 months of 1900, 13·54 inches on 95 days in 1901, 16·90 inches on 111 days in 1902, 17·39 inches on 122 days in 1903, and 13·69 inches on 110 days in 1904. The lowest July fall was ·70 inch on 9 days in 1885; the highest 6·72 inches on 20 days in 1896.

Mr. T. Bateman reports that the rainfall at the Green, Malahide, Co. Dublin, was ·948 inch on 15 days. The largest daily fall was ·190 inch on the 28th. The mean shade temperature was 63·3°, the extremes being—highest, 83·5° on the 14th; lowest, 41·0° on the 6th.

At the Ordnance Survey Office, Phœnix Park, rain fell on 16 days to the amount of ·950 inch, the greatest rainfall in 24 hours being ·140 inch on the 2nd. The total duration of bright sunshine was 154·8 hours, the longest daily sunshine being 15·6 hours on the 8th.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 1·932 inches on 11 days, compared with 1·395 inches on 15 days in 1904, 2·790 inches on 17 days in 1903, 4·550 inches on 11 days in 1902, 2·390 inches on 10 days in 1901, 5·140 inches on 15 days in 1900, 3·480 inches on 14 days in 1899, 1·145 inches on 6 days in 1898, 1·625 inches on 10 days in 1897, and 5·726 inches on 16 days in 1896. Of the total rainfall ·810 inch fell on the 10th. The total fall since January 1 has been 13·043 inches on 88 days, compared with 15·702 inches on 109 days in 1904, 20·230 inches on 107 days in 1903, 19·641 inches on 95 days in 1902, 16·060 inches on 85 days in 1901, 23·331 inches on 120 days in 1900, 22·990 inches on 109 days in 1899, 14·645 inches on 94 days in 1898, 19·750 inches on 116 days in 1897, and 13·082 inches on 77 days in 1896.

Dr. B. H. Steede reports that at the National Hospital for Consumption, Newcastle, Co. Wicklow, the July rainfall was 1·991 inches on 10 days compared with 3·796 inches on 13 days in 1902, 4·309 inches on 22 days in 1903, and 2·256 inches on 17 days in 1904. The heaviest daily rainfall was ·955 inch on the 12th. The rainfall from January 1 to July 31, inclusive, was 13·657 inches on 97 days, compared with 18·274 inches on 108 days in the first seven months of 1902, 23·855 inches on 130 days in that period of 1903, and 19·248 inches on 121 days in 1904.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 2·100 inches on 14 days. The largest measurement in 24 hours was ·505 inch on the 10th, but ·490 inch fell on the 28th and ·450 inch on the 25th.

According to Mr. W. Miller, the rainfall in Cork City was 1·70 inches, or one inch less than the average, and the rainy days were 12. The greatest fall was ·54 inch on the 26th, up to which day only ·48 inch had fallen. The mean temperature of the month was 61·5°, or 1·5° above the average for July. The thermometer rose to 76° on the 13th and fell to 45° on the 27th. The rainfall for 1905 up to July 31 was 19·99 inches on 113 days, compared with averages of 20·70 inches on 108 days respectively.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 63·0°, being the highest mean and 2·4° above the average, for July during 15 previous years (1873-83 and 1901-1904). The extremes were—highest, 80·7° on the 14th; lowest, 48·5° on the 4th. At Bournemouth, the mean was 65·7°, the extremes being—highest, 80° on the 23rd; lowest, 50° on the 7th. The maximum was between 75° and 80° on 4 days at Kingstown, and on 14 days at Bournemouth. The mean daily range was 13·0° at Kingstown, and 16·6° at Bournemouth. The mean relative humidity was 73 per cent. The mean temperature of the sea at Sandycove bathing-place was 56·1°, being 1·9° below the average for the month during the previous 7 years. The total rainfall was 0·62 inches on 13 days, being 2·17 inches below the average for July during 15 previous years; at Bournemouth it was 0·36 inches on 9 days. The total duration of bright sunshine was 173·8 hours, compared with 154·8 hours at the Ordnance Survey Office, Phœnix Park, 142·5 hours at Valentia, 138·5 hours at Birr Castle, 268·1 hours at Hastings, and 256·3 hours at Bournemouth. On the 7th, 15·7 hours of sunshine was recorded, being the longest duration for any day since the beginning of the year 1901.

AUGUST.—August, 1905, may be described as a changeable, cool, and rainy month. It will be especially memorable for the record-breaking rainstorm which visited the east coast of Ireland, and in particular the Counties Dublin and Wicklow, on Friday, the 25th. In Dublin this remarkable rainstorm began shortly after 9 p.m. of the 24th and persisted for 34 hours, the resulting measurement in the rain-gauge being 3·949 inches at Fitzwilliam Square, 3·789 inches in Trinity College, 4·330 inches at Leeson Park, 3·990 inches at Glasnevin Royal Botanic Gardens, and 3·725 inches at the Ordnance Survey Office, Phœnix Park. The following table of the rainfall measurements taken at 9 a.m. of Saturday, the 26th, for the previous 24 hours, may be looked on as historic from a meteorological point of view:—

	Inches.		Inches.
Dublin: Trinity College	3·300	Killiney: Cloneevin	3·060
„ Fitzwilliam Square ...	3·436	Stillorgan: White Cross	3·220
„ Leeson Park	3·740	Dundrum: Lynton	4·040
„ Leinster Road, Rathmines	3·459	Bray: Fassaroe	4·450
„ Royal Botanic Gardens, Glasnevin	3·580	„ Rocky Valley, Great Sugar Loaf	5·500
„ Ordnance Survey Office, Phœnix Park ...	3·350	Greystones: Knockdolian	3·350
Kingstown: The Park Observatory...	3·150	Newcastle: Royal National Hospital...	4·110
„ Board of Works Observatory	3·170	Malahide: The Green	3·110
		Balbriggan: Ardgillan	3·120

From this list it would appear that the rainfall entered to the 25th exceeded 3 inches at all stations in the Counties Dublin and Wicklow, while it rose above 4 and even 5 inches at stations situated near the Dublin and Wicklow Mountains. It is worth noting that the wind was easterly and north-easterly during the downpour—that is, on shore along the coast-line of the drenched counties.

The duration of bright sunshine was estimated at 138 hours, or a daily average of 4·5 hours, compared with a twenty years' average of 162·7 hours, or 36 per cent. of its possible duration, recorded at the Ordnance Survey Office, Phœnix Park.

In Dublin the arithmetical mean temperature (58·9°) was below the average (59·7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 57·4°. In the forty years ending with 1904, August was coldest in 1881 (M. T. = 57·0°), and warmest in 1899 (M. T. = 63·4°).

The mean height of the barometer was 29·845 inches, or 0·052 inch below the corrected average value for August—namely, 29·897 inches. The mercury rose to 30·368 inches at 9 a.m. of the 31st, and fell to 29·019 inches at 11 a.m. of the 4th. The observed range of atmospheric pressure was, therefore, 1·349 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 57·4°. It was 4·9° below the value for July, 1905. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·47, the mean temperature was 58·5°, or 0·8° below the average mean temperature for August, calculated in the same way, in the thirty years 1871-1900, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 58·9°, compared with a thirty years' average of 59·7°. On the 16th, the thermometer in the screen rose to 70·0°—wind, E.; on the 31st the temperature fell to 46·0°—wind, N.N.W. The minimum on the grass was 41·0°, also on the 31st.

The rainfall was 7·019 inches on 22 days. The average rainfall for August in the thirty-five years 1866-1900, inclusive, was 3·040 inches, and the average number of rainy days was 17. The rainfall, therefore, was more than twice the average, while the rainy days were also much in excess. In 1900 the rainfall in August was very large—5·871 inches on 17 days; in 1889, also, 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1904, 2·903 inches fell on 18 days. August, 1905, establishes a record for rainfall in this month in Dublin.

High winds were noted on 8 days, and attained the force of a gale on 3 days—the 3rd, 18th and 19th. Temperature reached 70° in the screen on only one day, compared with 18 days in August, 1899, 6 in 1900, 7 in 1901, only one day in both 1902 and 1903 and 9 days in 1904. Thunder was heard on the 1st and 10th, and a thunderstorm occurred on the 9th. A solar halo was seen on the 24th. The Eclipse of the Sun (799 out of 1,000 parts) was indifferently seen in Dublin on the 30th.

The rainfall in Dublin during the eight months ending August 31st amounted to 18·041 inches on 131 days, compared with 16·808 inches on 135 days in 1904, 21·872 inches on 157 days in 1903, 18·456 inches on 133 days in 1902, 14·384 inches on 106 days in 1901, 23·480 inches on 146 days in 1900, 18·200 inches on 117 days in 1899, 16·516 inches on 124 days in 1898, 19·388 inches on 149 days in 1897, 14·464 inches on 120 days in 1896, 9·455 inches on 96 days during the same period in 1887, and a thirty-five years' average of 17·660 inches on 130 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·840 inches, the range of atmospheric pressure being from 30·366 inches at 9 a.m. and 9 p.m. of the 31st to 29·053 inches at 9 a.m. of the 4th. The mean value of the readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 58·2°. The arithmetical mean of the daily maximal and minimal temperatures was 58·5°. The screened thermometers rose to 69·3° on the 6th, and fell to 46·0° on the 31st. On the 22nd the grass minimum was 35·9°. On the 6th the black bulb *in vacuo* rose to 130·6°. Rain fell on 20 days to the amount of 6·522 inches, the greatest fall in 24 hours being 3·300 inches on the 25th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 121·9 hours, of which 9·6 hours occurred on the 14th and again on the 16th. In August, 1904, there were 183·75 hours of bright sunshine. The mean earth temperatures were—at 1 ft., 59·9°; at 4ft., 58·5°. The one-foot thermometer ranged between 61·8° on the 17th and 57·4° on the 26th. The four-feet thermometer ranged from 59·2° on the 3rd to 57·5° on the 30th.

Dr. Christopher Joynt, F.R.C.P.I., returns the rainfall at 21 Leeson Park as amounting to 7·650 inches, of which 3·740 inches fell on the 25th, ·740 inch on the 3rd, ·700 inch on the 2nd, and ·590 inch on the 24th. The rainy days were 19.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 9·35 inches on 21 days. The maximal fall in 24 hours was 4·04 inches, measured on the 25th. The corresponding figures for 1901 were 3·11 inches on 16 days, for 1902, 2·73 inches on 18 days, for 1903, 2·78 inches on 25 days, and for 1904, ·98 inch on 20 days. The mean shade temperature was 59·1°, the range being from 70° on the 26th to 45° on the 31st. In August, 1901, the M. T. was 60·5°, in 1902, it was 58·7°, in 1903, 58·6°, and in 1904, 60·5°.

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured 7·556 inches of rain on 20 days, the largest amount which fell in 24 hours being 3·220 inches on the 25th.

Mr. T. Bateman reports that the rainfall at the Green, Malahide, Co. Dublin, was 7·181 inches on 21 days, the greatest fall in 24 hours being 3·110 inches on the 24th. The mean shade temperature was 57·8°, the extremes being—highest, 70·0° on the 14th; lowest, 44·0° on the 31st.

Captain Edward Taylor, D.L., reports that the rainfall in August at Ardgillan, Balbriggan, Co. Dublin, amounted to 6·89 inches on 22 days, the largest measurement on one day being 3·12 inches on the 25th. This was the greatest fall recorded at Ardgillan on any day of the 13 years, 1893-1905, inclusive, the next greatest having been 2·74 inches on November, 11, 1901. Rain began to fall at Ardgillan at 9 p.m. of the 24th, and continued till 5 a.m. of the 26th—a period of 32 hours during which 353 inches fell. This amount was exceeded during the rainstorm of November 11th and 12th, 1901, when over 4 inches of rain fell in 30 hours. It may be noticed that, without the fall on the 25th, the total rainfall for August would have been almost exactly equal to the average.

According to Mr. R. Cathcart Dobbs, J.P., at Knockdolian, Greystones, Co. Wicklow, the rainfall for August was 8·015 inches on 22 days, compared with 2·875 inches on 20 days in 1904, 2·870 inches on 27 days in 1903, 3·520 inches on 16 days in 1902, 3·625 inches on 15 days in 1901, 5·995 inches on 16 days in 1900, 2·640 inches on 11 days in 1899, 3·185 inches on 18 days in 1898, 6·195 inches on 27 days in 1897, and 1·245 inches on 14 days in 1896. The heaviest fall in 24 hours was 3·350 inches on the 25th. The total fall since January 1 amounts to 12·058 inches on 110 days, compared with 18·577 inches on 129 days in 1904, 23·100 inches on 134 days in 1903, 23·161 inches on 111 days in 1902, 19·685 inches on 100 days in 1901, 29·326 inches on 136 days in 1900, 25·630 inches on 120 days in 1899, 17·830 inches on 112 days in 1898, 25·945 inches on 143 days in 1897, and only 14·327 inches on 91 days in 1896.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 7·530 inches on 18 days. The largest measurements in 24 hours were 1·80 inches on the 24th, and 1·77 inches on the 3rd, but 1·09 inches fell on the 2nd.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'Brien Furlong, C.B., reports that the rainfall in August was 6·71 inches on 18 days, compared with a twenty years' (1885-1904) average of 3·131 inches on 16·9 days. On the 25th, 3·06 inches were measured. The month's rainfall is the highest recorded at Cloneevin, with one exception—July, 1896—when 6·72 inches fell on 22 days. Upwards of 6 inches was also recorded in October, 1894, when 6·46 inches fell on 18 days, and in August, 1900, when the fall was 6·06 inches on 17 days. The rainfall of the 25th (3·06 inches) is the greatest daily record at Cloneevin, the next highest being 2·81 inches on September 2, 1902, and 2·06 inches on November 23rd, 1898. Since January 1, 1905, 20·39 inches of rain have fallen on 122 days at this station.

According to Mr. W. Miller, the rainfall in Cork City was 6·77 inches, or 3·28 inches over the average, and the rainy days were 18. The greatest fall was 1·75 inches on the 24th. The mean temperature of the month was 55·5°, or 4·1° below the average. The thermometer rose to 70° on the 16th and fell to 42·5° on the 13th and 14th. The rainfall for 1905 up to August 31 was 26·7 inches on 131 days, compared with averages of 23·61 inches and 123 days respectively.

Dr. B. H. Steede reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 8·642 inches on 18 days, compared with 4·084 inches on 14 days in 1902, 3·171 inches on 24 days in 1903, and 2·623 inches on 10 days in 1904. The maximal temperature in the shade was 67·0° on the 5th, the minimal shade temperature was 45·0° on the 22nd. The heaviest daily rainfall was 4·110 inches on the 25th. During the 12 hours from 9 a.m. to 9 p.m. on the 25th, 3·620 inches of rain fell. The rainfall from January 1 to August 31, inclusive, was 22·299 inches on 115 days compared with 22·358 inches on 122 days in the first eight months of 1902, 27·026 inches on 154 days in that period of 1903, and 21·871 inches on 140 days in 1904.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 24 days to the amount of 6·485 inches, the greatest measurement in 24 hours being 3·350 inches on the 25th. The total amount of sunshine was 124·4 hours, the most on one day being 11 hours on the 14th and 16th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 58·8°, being 1·3° below the average for the month during 18 previous years (1873-83 and 1898-1904), the extremes being —highest, 69·2° on the 14th; lowest, 48·5° on the 24th and 31st. At Bournemouth, the mean was 62·0°, the extremes being—highest, 76° on the 3rd; lowest, 47° on the 24th. The mean daily range of temperature was 11°; at Bournemouth it was 15·0°. The relative humidity was 77 per cent., being 2 per cent. above the average for the month during the previous 4 years. The rainfall amounted to 6·80 inches on 19 days, being 3·6 inches above the average for August during 15 previous years (1873-83 and 1901-04), and the absolute highest for August during these 15 years. As much as 3·13 inches was measured in the 24 hours ending 9 a.m. on the 26th, the greatest rainfall for any 24 hours recorded at Kingstown, the next highest being that of September 2nd, 1902, when 2·83 inches fell. At Bournemouth the rainfall was 2·63 inches on 14 days. The duration of bright sunshine was 141·9 hours, being 28·4 hours below the average for the month during the previous 4 years, as compared with 124·4 hours at the Ordnance Office, Phœnix Park, 144·9 hours at Valentia, 149·0 hours at Birr Castle, 164·1 hours at Southport, and 194·3 hours at Hastings.

SEPTEMBER.—A favourable, but cool, month. There was a warm period at the beginning, lasting to the 7th, and S.W. winds were also in evidence at that time. But the remainder of the month was cool, the nights being often especially sharp, and winds from polar quarters were constant. Some heavy local showers on the 24th and 27th and 28th disturbed the distribution of rainfall in the Dublin district. The duration of bright sunshine was estimated at 134·5 hours, equal to a daily mean of 4·5 hours compared with a twenty years' mean of 143·4 hours recorded at the Ordnance Survey Office, Phœnix Park, or 38 per cent. of the possible duration. The prevalent winds were W., S.W., and N.E.

In Dublin the arithmetical mean temperature (54·9°) was 1·0° below the average (55·9°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 53·7°. In the forty years ending with 1904, September was coldest in 1886 and 1892 (M. T. = 53·0°), and warmest in 1865 (M. T. = 61·4°) and 1898 (M. T. = 60·2°). In 1904 the M. T. was 56·8°.

The mean height of the barometer was 29·974 inches, or 0·064 inch above the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·394 inches at 9 a.m. of the 17th, and fell to 29·219 inches at 9 a.m. of the 7th. The observed range of atmospheric pressure was, therefore, 1·175 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 53·7°, or 3·7° below the value for August, 1905. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·476, the mean temperature was 54·6°, or 1·0° below the average mean temperature for September, calculated in the same way, in the thirty years, 1871-1900, inclusive (55·6°). The arithmetical mean of the maximal and minimal readings was 54·9°, compared with a thirty years' average of 55·9°. On the 4th the thermometer in the screen rose to 68·1°—wind, S.W.; on the 26th the temperature fell to 38·5°—wind, W. The minimum on the grass was 34·1° on the 15th.

The rainfall was 1·225 inches on 14 days. The average rainfall for September in the thirty-five years, 1866-1900, inclusive, was 2·220 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4·048 inches on, however, only 13 days; in 1896 no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1904, 2·339 inches fell on 17 days.

High winds were noted on 13 days, but attained the force of a gale on the 7th and 8th alone. The atmosphere was foggy on the 20th, 21st, and 26th. Solar halos were observed on the 5th, 22nd, 24th, and 26th.

The rainfall in Dublin during the nine months ending September 30th amounted to 19·266 inches on 145 days, compared with 19·147 inches on 152 days in 1904, 25·269 inches on 174 days in 1903, 21·425 inches on 149 days in 1902, 18·070 inches on 124 days in 1901, 24·394 inches on 156 days in 1900, 20·948 inches on 138 days in 1899, only 10·968 inches on 112 days in 1887, and a thirty-five years' average of 19·880 inches on 145 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·976 inches, the range of atmospheric pressure being from 29·221 inches at 9 a.m. of the 7th to 30·393 inches at 9 a.m. of the 17th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 54·9°. The arithmetical mean of the daily maximal and minimal temperature was 54·8°. The screened thermometers rose to 69·4° on the 4th, and fell to 38·8° on the 26th. On the 27th the grass minimum was 29·8°. On the 6th the black bulb *in vacuo* rose to 126·3°. Rain fell on 13 days to the amount of 1·148 inches, the greatest fall in 24 hours being ·258 inch on the 24th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 120·4 hours, of which 9·1 hours occurred on the 7th. The mean earth temperatures were—at 1 ft., 55·7°; at 4 ft., 56·1°. The one-foot thermometer ranged from 59·9° on the 5th to 52·4° on the 27th. The four-feet thermometer ranged from 57·5° on the 7th to 54·2° on the 29th and 30th.

At 21 Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., registered 1·185 inches of rain on 13 days, the greatest fall in 24 hours being ·330 inch on the 27th.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·055 inches on 10 days, compared with 2·880 inches on 12 days in 1904, 3·950 inches on 20 days in 1903, 3·995 inches on 12 days in 1902, 5·420 inches on 19 days in 1901, and only ·695 inch on but 4 days in 1900. The heaviest fall in 24 hours was ·300 inch on the 8th. At Knockdolian the rainfall since January 1st, 1905, has been 22·113 inches on 120 days, compared with 21·457 inches on 141 days in 1904, 27·050 inches on 154 days in 1903, 27·156 inches on 123 days in 1902, 25·105 inches on 119 days in 1901, 30·021 inches on 140 days in 1900, 28·440 inches on 139 days in 1899, and 19·688 inches on 124 days in 1898.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 1·07 inches on 15 days, compared with 5·03 inches on 18 days in 1901, 4·09 inches on 19 days in 1902, 4·33 inches on 21 days in 1903, and 2·94 inches on 19 days in 1904. The greatest daily fall was ·25 inch on the 8th. The mean temperature in the shade was 54·9°, compared with 55·3° in September, 1903, and 56·2° in 1904. The screened thermometers rose to 75° on the 4th and 5th, and fell to 41·0° on the 11th.

Miss Muriel E. O'Sullivan reports that at Whitecross, Stillorgan, Co. Dublin, only ·853 inch of rain fell on 13 days, of which small amount nearly one-half (·421 inch) was measured on the 27th.

Dr. B. H. Steede reports that at the Royal National Hospital, Newcastle, Co. Wicklow, the rainfall amounted to 1·133 inches on 13 days, ·216 inch falling on the 4th. The maximal temperature in the shade was 69·0° on the 4th, the minimum was 38·2° on the 15th. Since January 1, rain has fallen on 128 days to the amount of 23·432 inches.

Mr. T. Bateman reports that the rainfall at the Green, Malahide, Co. Dublin, was 1·038 inches on 11 days, the greatest fall in 24 hours being ·205 inch on the 27th. The mean shade temperature was 53·8°, the extremes being—highest, 69° on the 5th; lowest, 37° on the 26th.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 3·465 inches on 16 days, the heaviest fall in 24 hours being ·715 inch on the 8th.

Mr. Wm. Miller states that in the City of Cork the rainfall was 1·35 inches on 11 days, or 1·35 inches below the average for September. The rainfall was greatest on the 8th, when 0·32 inch was measured. In the 9 months ended September 30, the rainfall was 28·13 inches, or 1·74 inches above the average, but 1·62 inches less than in the corresponding period of 1904. The rainy days in 1905 have so far been 142, or 4 above the average.

The rainfall recorded at the Ordnance Survey Office, Phœnix Park, was 1·165 inches on 13 days, the greatest measurement in 24 hours being ·270 inch on the 27th. The total amount of sunshine at this station was 122·6 hours, the most registered on any one day being 9·8 hours on the 9th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 56·0°, being 0·9° below the average for September during 18 previous years (1873-80 and 1898-1904), the extremes being—highest, 70·7° on the 4th; lowest, 40·5° on the 15th. At Bournemouth the mean was 56·7°, the extremes being—highest, 75° on the 4th; lowest, 40° on the 27th. The mean daily range of temperature was 10·3°; at Bournemouth it was 15·3°. The mean temperature of the sea at Sandycove bathing-place was 56°, being 1·2° below the average for the month during the previous 7 years. The relative humidity was 76 per cent., being 1 per cent. below the average for the month during the previous 4 years. The rainfall was 0·85 inch on 10 days, being 1·61 inches below the average for the month during 15 previous years (1873-83 and 1901-04), the greatest fall for any 24 hours being 0·36 inch on the 28th. The rainfall at Kingstown for the past 9 months amounted to 18·98 inches, being 1·32 inch below the average for the corresponding 9 months during 15 previous years. The rainfall at Bournemouth was 2·08 inches on 14 days. The duration of bright sunshine was 131·5 hours compared with 122·6 hours at the Ordnance Survey Office, Phœnix Park, 94·6 hours at Valentia, 113·9 hours at Birr Castle, 113·3 hours at Southport, and 118·8 hours at Hastings.

Mr. Robert O'B. Furlong, C.B., reports that the rainfall at Cloneevin, Killiney, Co. Dublin, was only ·79 inch on 10 days, compared with an average for September of 2·148 inches on 13·5 days in the twenty years 1885-1904. The greatest fall in 24 hours was ·25 inch on the 27th. There was absolute drought from the 13th to the 26th, both days included. The rainfall in September at this station had been lower in 1903 (·46 inch on 11 days), 1888 (·58 inch on 7 days), 1894 (·70 inch on 5 days), 1900 (·70 inch on 8 days), and 1889 (·77 inch on 11 days). In 1905 the total rainfall to September 30 amounts to 21·09 inches on 132 days.

OCTOBER.—October, 1905, was a quiet, cool, but favourable month. The mean temperature was 2·2° in defect, but this was due to almost continuously low temperatures after the 13th, more especially at night, when ground frost occurred on as many as 13 occasions. The 4th was the only stormy day. The rainfall, while small, was frequent, as there were 16 days on which ·005 inch or upwards was measured. It was only 40·7 per cent. of the average, whereas the rainy days were 88·9 per cent. of the average. The estimated duration of bright sunshine was 110·75 hours, or a daily mean value of 3·6 hours. It is noteworthy that in East Wicklow the rainfall of the month was very scanty, only ·707 inch being recorded at Newcastle and only ·641 inch at Greystones.

In Dublin the arithmetical mean temperature (47·2°) was very decidedly below the average (49·4°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 45·8°. In the forty-one years ending with 1905, October was coldest in 1892 (M. T. = 44·8°) and in 1896 (M. T. = 45·0°). It was warmest in 1876 (M.T. = 53·1°). The M. T. in 1898 was 52·8°. In 1904 it was 51·6°.

The mean height of the barometer was 30·069 inches, or 0·229 inch above the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·547 inches at 9 a.m. of the 11th, and fell to 28·965 inches at 2.30 p.m. of the 30th. The observed range of atmospheric pressure, was, therefore, 1·582 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 45·8°, or 7·9° below the value for September, 1905. The arithmetical mean of the maximal and minimal readings was 47·2°, compared with a thirty years' average of 49·4°. Using the formula, *Mean Temp.* = *Min* + (*Max.*—*Min.*) × ·485, the mean temperature was 47·0°, or 2·2° below the average mean temperature for October, calculated in the same way, in thirty years, 1871-1900, inclusive (49·2°). On the 9th the thermometer in the screen rose to 62·9°—wind, W.; on the 21st the temperature fell to 29·0°—wind, W., S.W. The minimum on the grass was 23·0° on the 21st.

The rainfall was 1·196 inches, distributed over 16 days; both the rainfall and the rainy days were below the average. The average rainfall for October in the thirty-five years, 1866-1900, inclusive, was 2·940 inches, and the average number of rainy days was 18. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1904 only ·454 inch fell on 11 days; in 1890 only ·639 inch fell on but 11 days; in 1884, only ·834 inch on but 14 days; and in 1868 only ·856 inch on 15 days. It will be seen from the above figures that the scanty rainfall of October, 1904, established a record deficiency for this month in Dublin.

High winds were noted on 7 days, but attained the force of a gale on only one occasion—the 4th. The atmosphere was more or less foggy in Dublin on the 9th, 10th, 20th, 21st, 22nd and 25th.

The duration of bright sunshine was estimated at 110·75 hours, compared with 127·25 hours in 1900, 115·25 hours in 1901, only 84·25 hours in 1902, 132·75 hours in 1903, and 93·25 hours in 1904. Solar halos were seen on the 1st, 9th and 25th. Lightning occurred on the evening and night of the 29th.

The rainfall in Dublin during the ten months ending October 31st amounted to 20·462 inches on 161 days, compared with 12·366 inches on 123 days during the same period in 1887 (the dry year), 27·863 inches on 177 days in 1900, 20·466 inches on 145 days in 1901, 24·481 inches on 172 days in 1902, 27·882 inches on 196 days in 1903, 19·601 inches on 163 days in 1904, and a thirty-five years' average of 22·820 inches on 163 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·067 inches, the range of atmospheric pressure being from 30·550 inches at 9 a.m. of the 11th to 29·006 inches at 9 a.m. of the 30th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46·9°. The arithmetical mean of the daily maximal and minimal temperatures was 47·4°. The screened thermometers rose to 63·7° on the 9th, and fell to 30·5° on the 21st. On this latter date the grass minimum was 21·8°, while ground frost was felt on 16 nights. On the 8th the black bulb *in vacuo* rose to 106·0°. Rain fell on 14 days to the amount of 1·032 inches, the greatest fall in 24 hours being ·297 inch on the 2nd. The duration of bright sunshine according to the Campbell-Stokes recorder was 92·7 hours, of which 8·4 hours occurred on the 5th and again on the 6th. The mean daily sunshine was 3·0 hours. The mean temperature of the soil at a depth of 1 foot was 48·7° at 9 a.m.; at a depth of 4 feet, it was 51·9° at 9 a.m. The subsoil temperature at 1 foot decreased from 53·1° on the 4th to 44·0° on the 25th and 26th. At 4 feet it decreased from 54·1° on the 1st to 48·6° on the 31st.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., returns the rainfall in October at 1·01 inches on 14 days, compared with 2·760 inches on 20 days in 1902, 3·820 inches on 26 days in 1903, only ·290 inch on 12 days in 1904, and a twenty years' average (1885-1904) of 2·996 inches on 16·6 days. On the 2nd ·27 inch fell. Since January 1, 1905, 22·100 inches of rain have fallen at this station on 146 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·092 inches on 14 days, the greatest fall in 24 hours being ·275 inch on the 30th. The mean shade temperature was 45°, the extremes being—highest, 62·5° on the 10th; lowest, 28° on the 21st.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 15 days to the amount of 1·54 inches, compared with 2·40 inches on 21 days in 1901, 3·45 inches on 24 days in 1902, 3·38 inches on 26 days in 1903, and ·42 inch on 9 days in 1904. The greatest measurement in 24 hours was ·43 inch on the 2nd. The mean temperature in the shade was 47·1°, the range being from 61° on the 9th to 31° on the 21st. The mean temperature of October was 50·0° in 1901, 50·9° in 1902, 50·8° in 1903, and 51·6° in 1904.

Deputy Surgeon-General C. Joynt, F.R.C.P.I., registered 1·332 inches of rain on 16 days at 21 Leeson Park, Dublin, the largest measurement in 24 hours being ·458 inch on the 2nd.

Miss Muriel E. O'Sullivan recorded a rainfall of 1·278 inches on 14 days at Whitecross, Stillorgan, Co. Dublin. The heaviest fall in 24 hours was ·400 inch on the 2nd.

Mr. R. Cathcart Dobbs, J.P., reports that the rainfall in October at Knockdolian, Greystones, Co. Wicklow, amounted to only ·641 inch on 11 days. Of this quantity, ·195 inch fell on the 2nd. From January 1st, 1905, up to October 31st, rain fell at Knockdolian on 131 days to the total amount of 22·754 inches. In 1893 the rainfall in the corresponding ten months was 17·801 inches on 133 days; in 1897, 32·730 inches on 171 days; in 1898, 24·177 inches on 140 days; in 1899, 30·000 inches on 150 days; in 1900, 33·311 inches on 155 days; in 1901, 28·030 inches on 135 days; in 1902, 31·811 inches on 140 days; in 1903, 30·965 inches on 181 days; and in 1904, 22·087 inches on 151 days.

Dr. B. H. Steede reports: At the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was ·707 inch on 10 days, compared with 3·175 inches on 13 days in 1897, 4·385 inches on 17 days in 1898, 1·484 inches on 11 days in 1899, 3·551 inches on 14 days in 1900, 3·200 inches on 21 days in 1901, 3·577 inches on 18 days in 1902, 4·155 inches on 26 days in 1903, and ·868 inch on 13 days in 1904. The heaviest fall in 24 hours was ·160 inch on the 29th. The highest temperature in the screen was 63·2° on the 9th, the lowest was 31·3° on the 21st. At this Normal Climatological Station the rainfall from January 1 to October 31, inclusive, amounted to 24·139 inches on 138 days, compared with 26·479 inches on 139 days in the corresponding ten months of 1898, 27·643 inches on 140 days in 1899, 28·599 inches on 150 days in 1900, 24·953 inches on 142 days in 1901, 29·742 inches on 154 days in 1902, 35·516 inches on 201 days in 1903, and 26·562 inches on 168 days in 1904.

Mr. William Miller states that in the City of Cork there were 9 days with rain during the month—total fall, 0·92 inch, which was 2·38 inches under the average. The greatest day's rain was that of the 28th—0·42 inch. The rainfall of the past ten months was 29·03 inches, which was 0·66 inch short of the average for the same period. The rainy days in 1905 so far have been 151, or 5 below the average.

At the Ordnance Survey Office, Phœnix Park, Dublin, the October rainfall was 1·365 inches on 17 days, compared with ·650 inch on 10 days in 1904, and 2·339 inches on 24 days in 1903. The heaviest fall in 24 hours was ·390 inch on the 2nd. At the Royal Botanic Gardens, Glasnevin, the rainfall on 16 days was 1·150 inches, the greatest daily fall being ·270 inch on the 3rd.

The Rev. Arthur Wilson, M.A., recorded a rainfall of 1·52 inches on 9 days at the Rectory, Dunmanway, Co. Cork. Up to the 25th of the month only ·336 inch fell, including ·155 inch on the 21st. The heaviest falls in 24 hours were ·48 inch on the 28th, ·25 inch on the 29th, and ·24 inch on the 30th, that is ·97 inch on 3 days. Mr. F. Fitzmaurice, of Carbery, recorded 1·64 inches for the month in a self-registering Zero rain gauge.

Dr. J. Byrne Power, F. R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 48·6°, being 3·2° below the average for the month during 18 previous years (1873-83 and 1898-1904), and the lowest mean for October during those 18 years. The extremes were—highest, 62·7° on the 9th; lowest, 34·5° on the 21st. At Bournemouth the mean was 47·7°, the extremes being—highest, 62° on the 9th; lowest, 28° on the 18th and 27th. The mean daily range of temperature was 10·3°; at Bournemouth it was 14·3°. The mean temperature of the sea at Sandycove bathing-place was 51·1°, being as much as 4° below the average for the month during the previous 7 years. The relative humidity was 78 per cent., being 2 per cent. below the average for October during the previous 4 years. The rainfall was 0·71 inch on 13 days, being nearly 2 inches below the average for the month during 15 previous years (1873-83 and 1901-04); at Bournemouth it amounted to 2·27 inches. The duration of bright sunshine was 121·0 hours, compared with 111·9 hours recorded at the Ordnance Office, Phœnix Park, 117·8 hours at Valentia, 99·3 hours at Birr Castle, 115·6 hours at Southport, and 137·1 hours at Hastings.

NOVEMBER.—November, 1905, was a cold, dull, damp, foggy and wet month. The mean atmospheric pressure was as much below (·209 inch) the average as it had been above it in November, 1904. The mean temperature was 2·7° below the average. Snow lay in Dublin throughout the 18th and 19th. Brilliant aurora was observed between 8 and 9 p.m. of the 15th. The extreme temperatures of the month were recorded within three days of each other, and the difference was as much as 32·3°, the swing of temperature being from 23·6° on the 19th to 55·9° on the 22nd.

The duration of bright sunshine was estimated at 69·75 hours, or a daily average of 2·3 hours.

In Dublin the arithmetical mean temperature (42·7°) was 2·7° below the average (45·4°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 41·4°. In the forty-one years ending with 1905, November was coldest in 1878 (M. T. = 38·2°), and 1870 (M. T. = 42·2°); warmest in 1899 (M. T. = 50·7°), and in 1881 (M. T. = 50·3°). In 1904 the M. T. was 45·3°.

The mean height of the barometer was 29·651 inches, or 0·209 inch below the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·231 inches at 9 p.m. of the 17th, and fell to 28·775 inches at 3.20 p.m. of the 26th. The observed range of atmospheric pressure was, therefore, 1·456 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·4°, or 4.4° below the value for October, 1905. The arithmetical mean of the maximal and minimal readings was 42·7°, compared with a thirty years' (1871-1900) average of 45·4°. On the 22nd the thermometer in the screen rose to 55·9°—wind, S.W.; on the 19th the temperature fell to 23·6°—wind, W.N.W. The minimum on the grass was 19·8°, also on the 19th.

The rainfall was 3·551 inches on 19 days—the rainfall and the rainy days were much above the average. The average rainfall for November in the thirty-five years, 1866-1900, inclusive, was 2·560 inches, and the average number of rainy days was 17·0. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1904 the rainfall was 1·077 inches on 9 days.

High winds were noted on 8 days, and attained the force of a gale on three days—the 22nd, 26th and 29th. The atmosphere was more or less foggy in Dublin on the 1st, 3rd, 4th, 8th, 9th, 15th, 17th, 18th, 19th, 20th and 29th. Solar halos were seen on the 6th, 11th and 12th; a lunar halo appeared on the 5th. Sleet or snow fell on the 15th, 17th, 18th and 19th; hail on the 14th, 15th and 17th. Lightning was seen on the 4th and 15th, and a brilliant display of aurora borealis was observed on the evening of the 15th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 24·013 inches on 180 days, compared with 15·378 inches on 141 days during the same period in 1887, 24·450 inches on 162 days in 1899, 32·736 inches on 196 days in 1900, 24·086 inches on 156 days in 1901, 27·812 inches on 190 days in 1902, 30·015 inches on 212 days in 1903, 20·678 inches on 172 days in 1904, and a thirty-five years' average of 25·380 inches on 180 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·646 inches, the range of atmospheric pressure being from 30·227 inches at 9 p.m. of the 17th to 28·854 inches at 9 a.m. of the 26th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42·5°. The arithmetical mean of the daily maximal and minimal temperatures was 43·2°. The screened thermometers rose to 55·9° on the 22nd, and fell to 23·0° on the 19th. On the 9th the grass minimum was 21·0°. On the 4th the black bulb *in vacuo* rose to 84·8°. Rain fell on 19 days to the amount of 3·651 inches, the greatest fall in 24 hours being ·700 inch on the 1st. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 47·3 hours, of which 5·0 hours occurred on the 24th. The mean daily sunshine was 1·6 hours. The mean temperature of the soil at a depth of one foot was 42·9° at 9 a.m.; at a depth of 4 feet, it was 46·7° at 9 a.m.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., states that 3·85 inches of rain fell on 21 days, compared with a twenty years' (1885-1904) average of 3·00 inches on 15·9 days. The maximal fall in 24 hours was ·70 inch on the 1st. Since January 1, 1905, 25·95 inches of rain have fallen at this station on 167 days. The corresponding figures for 1898 were 26·77 inches on 173 days; 1899, 27·98 inches on 162 days; 1900, 33·47 inches on 188 days; 1901, 26·10 inches on 161 days; 1902, 30·18 inches on 178 days; 1903, 30·05 inches on 203 days; and 1904, 20·39 inches on 166 days. Snow fell on the 17th with hard frost. Hail fell on the 14th and 15th.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 4·761 inches on 19 days. Of the total quantity ·660 inch fell on the 13th, and ·595 inch on the 1st. From January 1st, 1905, up to November 30th, rain fell at Greystones on 150 days to the amount of 27·515 inches. The corresponding figures for 1898 were 28·786 inches on 156 days; 1899, 32·870 inches on 162 days; 1900, 30·926 inches on 173 days; 1901, 31·425 inches on 147 days; 1902, 37·101 inches on 157 days; 1903, 33·070 inches on 193 days; and 1904, 23·572 inches on 160 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 22 days to the amount of 4·35 inches, the greatest measurement in 24 hours being ·75 inch on the 1st. In November, 1901, the rainfall was 3·53 inches on 8 days; in 1902, it was 4·61 inches on 17 days; in 1903, 1·93 inches on 14 days; and in 1904, 1·26 inches on 11 days. The mean temperature in the shade was 42·4°, the range being from 25° on the 19th to 54° on the 22nd. Snow and hail fell on the 17th.

Dr. B. H. Steede reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 6·082 inches on 22 days, compared with 5·724 inches on 18 days in 1900, 3·196 inches on 13 days in 1901, 5·551 inches on 18 days in 1902, 2·571 inches on 13 days in 1903, and 1·341 inches on 10 days in 1904. The maximal fall in 24 hours was ·765 inch on the 4th. Since January 1, 1905, the rainfall at Newcastle amounted to 30·221 inches on 160 days. The corresponding figures for 1899 were 30·832 inches on 152 days; 1900, 34·323 inches on 168 days; 1901, 28·149 inches on 155 days; 1902, 35·293 inches on 172 days; 1903, 38·087 inches on 214 days; and 1904, 27·903 inches on 178 days. On the 22nd the screened thermometers at the Royal National Hospital rose to 52·2°, on the 19th they fell to 27·0°.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 20 days to the amount of 3·730 inches, the largest measurement in 24 hours being ·775 inch on the 1st. The total amount of sunshine was 64·3 hours, the most in one day being 6·4 hours on the 17th and 24th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 4·183 inches on 22 days; the greatest fall in 24 hours was ·685 inch on the 1st. The mean shade temperature was 39·5°, the extremes being—highest, 51° on the 11th; lowest, 23° on the 19th.

At Leeson Park, Dublin, Deputy Surgeon-General C. Joynt, M.D., registered 3·795 inches of rain on 18 days, the largest measurement in 24 hours being ·750 inch on the 1st.

Miss Muriel E. O'Sulllivan reports that the rainfall at White Cross, Stillorgan, Co. Dublin, was 4·091 inches on 20 days, ·780 inch falling on the 1st and ·530 inch on the 13th.

In the City of Cork Mr. William Miller returns the rainfall at 4·64 inches, or ·58 inch above the average for November. There were 20 rainy days. The heaviest fall in 24 hours was ·92 inch on the 25th. Up to November 30th, the rainfall of 1905 amounted to 33·67 inches on 171 days.

At Dunmanway Rectory, Co. Cork, the Rev. Arthur Wilson, M.A., registered a rainfall of 6·12 inches, the heaviest falls in 24 hours being 1·29 inches on the 25th, ·86 inch on the 12th, ·75 inch on the 29th, and ·71 inch on the 27th. Mr. F. Fitzmaurice registered 6·29 inches in a self-registering zero gauge at Carbery, Co. Cork.

Dr. J. Bryne Power, F.R. Met. Soc., Medical Superintendent Officer of Health for Kingstown, reports that the mean temperature at that health resort was 44·1°, being 1·1° above the average for November during 18 previous years (1873-83 and 1898-1904). The extremes were—highest, 55·7° on the 22nd; lowest, 29·5° on the 19th. At Bournemouth the mean was 43·7°, the extremes being—highest, 55° on the 1st and 28th; lowest, 26° on the 21st. The mean daily range of temperature was 8·9°, at Bournemouth it was 10·4°. The mean temperature of the sea at Sandycove bathing-place was 46·9°, being 3·1° below the average for the month during the previous 7 years. The rainfall was 3·17 inches on 21 days, being 0·56 inches above the average for the month during 15 previous years (1873-83 and 1901-04); at Bournemouth it was 3·72 inches on 22 days. The duration of bright sunshine was 72 hours as compared with 64·3 hours at Phœnix Park, 85·9 hours at Valentia, 61·7 hours at Birr Castle, 52·1 hours at Southport, and 62·7 hours at Hastings.

DECEMBER.—A singularly open, dull month, with scanty rainfall up to the 18th—namely, only ·242 inch on but 6 days. An anticyclone of great intensity and of considerable staying power lay over the British Isles from the 9th to the 17th—the mean height of the barometer in the week ended the 16th being 30·597 inches, and the unusual reading of 30·938 inches being recorded in Dublin at 10.30 a.m. of the 12th. The mean temperature of Christmas Day was 53·2°, or about 12° above the average for the time of year. A violent south-easterly gale raged round the Irish coasts on the 30th and 31st. It was apparently due to the obstruction offered to the advance of an Atlantic depression by an area of intense cold in Scandinavia.

In the City of Dublin the estimated duration of bright sunshine was 51·75 hours, compared with 53·25 hours in 1902, 67·25 hours in 1903, and 55·25 hours in 1904—the daily average being 1·7 hours compared with 1·72 hours in 1902, 2·17 hours in 1903, and 1·8 hours in 1904.

In Dublin the arithmetical mean temperature (47·1°) was 5·4° above the average (41·7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 46·2°. In the forty-one years ending with 1905, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°); warmest in 1898 (M. T. = 47·6°), and in 1900 (M. T. = 47·1°). In 1904, the M. T. was 43·9°.

The mean height of the barometer was 30·096 inches, or 0·221 inch above the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·938 inches at 10·30 a.m. of the 12th, and fell to 29·321 inches at 9 a.m. of the 28th. The observed range of atmospheric pressure was, therefore, 1·617 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46·2°, or as much as 4·8° above the value for November, 1905. Using the formula *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × ·52, the value was 47·2° or 5·3° above the average mean temperature for December, calculated in the same way, in the thirty years, 1871-1900, inclusive (41·9°). The arithmetical mean of the maximal and minimal readings was 47·1°, compared with a thirty years' average of 41·7°. On the 25th the thermometer in the screen rose to 55·6°—wind, S.S.W.; on the 10th the temperature fell to 34·0°—wind, S.S.W. The minimum on the grass was 28·0° on the 10th. There was no frost in the screen, and only one night of frost on the grass was recorded.

The rainfall was 1·264 inches, distributed over 13 days. The average rainfall for December in the thirty-five years, 1866-1900, was 2·390 inches, and the average number of rainy days was 18. The rainfall, therefore, and also the rainy days were below the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892 only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days. In 1904, 1·502 inches of rain fell on 17 days.

High winds were noted on 18 days, and attained the force of a gale on four occasions—the 5th, 18th, 30th and 31st. The atmosphere was more or less foggy in Dublin on the 12th, 13th, 16th and 29th. Hail fell on the 5th and 31st. A solar halo was seen on the 1st, and lunar halos appeared on the 6th, 7th and 15th.

The rainfall in Dublin during 1905 amounted to 25·277 inches on 193 days, compared with 22·180 inches on 189 days in 1904, 31·601 inches on 228 days in 1903, 29·375 inches on 203 days in 1902, 26·075 inches on 179 days in 1901, 34·338 inches on 216 days in 1900, 27·737 inches on 186 days in 1899, 27·048 inches on 194 days in 1898, 29·344 inches on 211 days in 1897, 26·901 inches on 194 days in 1896, 31·242 inches on 194 days in 1895, only 16·601 inches on 160 days in 1887, and a thirty-five years' average of 27·770 inches on 198 days.

Mr. Maurice Sydney Moore reports that, at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·096 inches, the range of atmospheric pressure being from 30·904 inches at 9 p.m. of the 12th to 29·324 inches at 9 p.m. of the 28th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 46·8°. The arithmetical mean of the daily maximal and minimal temperatures was 47·2°. The screened thermometers rose to 55·1° on the 24th, and fell to 32·2° on the 10th. On this latter date the grass minimum was 22·1°. On the 25th the black bulb *in vacuo* rose to 75·9°. Rain fell on 13 days to the amount of 1·081 inches, the greatest fall in 24 hours being ·230 inch on the 18th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 31·3 hours, of which 4·3 hours occurred on the 7th. The mean daily sunshine was 1·0 hour. The mean temperature of the soil at 9 a.m. at a depth of 1 foot was 44·0°, at a depth of 4 feet it was 45·6°.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall in December was 1·405 inches on 10 days, compared with 1·890 inches on 15 days in 1904, 2·830 inches on 18 days in 1903, and 2·920 inches on only 11 days in 1902. Of the total amount ·465 inch fell on the 27th. From January 1st to December 31st, 1905, rain fell at Knockdolian on 160 days, to the total amount of 28·920 inches. The corresponding figures for 1896 were 36·102 inches on 169 days; 1897, 42·885 inches on 210 days; 1898, 30·546 inches on 171 days; 1899, 36·690 inches on 182 days; 1900, 42·716 inches on 191 days; 1901, 34·750 inches on 166 days; 1902, 40·021 inches on 168 days; 1903, 35·900 inches on 211 days; and 1904, 25·462 inches on 175 days.

Miss Muriel E. O'Sullivan returns the rainfall at White Cross, Stillorgan, Co. Dublin, at 1·948 inches on 12 days, ·380 inch being measured on the 18th, and ·378 inch on the 17th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·414 inches on 13 days. The greatest fall in 24 hours was ·320 inch on the 18th. The mean shade temperature was 43·2°, the extremes being—highest, 53° on the 2nd; lowest, 29·5° on the 9th.

The Rev. Arthur Wilson, M.A., reports that rain fell on 20 days at the Rectory, Dunmanway, Co. Cork, to the amount of 5·41 inches. The heaviest falls were 1·76 inches on 30th, ·69 inch on the 24th, ·68 inch on the 18th, and ·60 inch on the 31st. No rain fell from the 9th to the 16th inclusive.

Deputy Surgeon-General C. Joynt, M.D., F.R.C.P.I., recorded 1·415 inches of rain on 15 days at 21 Leeson Park, Dublin. On the 18th, and again on the 27th, the measurement was ·280 inch.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Cloneevin, Killiney, at 1·73 inches on 13 days. The maximal fall in 24 hours was ·40 inch on the 18th. The average December rainfall of the 20 years (1885-1904) was 2·388 inches on 17·4 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 16 days to the amount of 1·71 inches, ·30 inch being measured on the 30th. Temperature ranged from 58·0° on the 25th to 37·0° on the 10th. The mean shade temperature was 46·3° Fahrenheit. In 1903, 2·21 inches of rain fell on 20 days, and in 1904, 2·14 inches on 21 days. The total rainfall in 1905 at Lynton was 31·83 inches on 212 days.

At Wellesley-terrace, Cork, according to Mr. W. Miller, the December rainfall was 3·58 inches on 17 days, the measurement being 0·87 inch less than the average. The greatest daily rainfall was 1·45 inches on the 30th. The year's rainfall at this station was 37·25 inches on 188 days, the total being 1·25 inches under the average, and the rainy days being 9 in defect. Mr. Miller observes that the mean temperature of the past December was 4·4° above that of November, whereas December on an average of 25 years should be 3° colder than November.

At the Ordnance Survey Office, Phœnix Park, Dublin, 1·251 inches fell on 17 days, ·425 inch being recorded on the 27th. The total amount of sunshine at this station was 43·8 hours, the most on one day being 6·6 hours, on the 9th.

Dr. B. H. Steede reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell on 18 days to the amount of 2·131 inches. The heaviest fall in 24 hours was ·431 inch on the 27th. The highest temperature was 54·2° on the 6th and 7th, the lowest was 32·0° on the 15th. At this Normal Climatological Station the total rainfall during the year 1905 was 32·352 inches on 178 days. In 1903 it had been 41·820 inches on 231 days, and in 1904, 30·149 inches on 191 days.

Dr. J. Byrne Power, F.R., Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 47·1°, being 4·1° above the average for December during eighteen previous years (1873-83 and 1898-1904). The extremes were—highest, 55·7° on the 6th; lowest, 34·5° on the 10th. At Bournemouth the mean was 43·2°, the extremes being—highest, ·57° on the 8th; lowest, 28° on the 12th. The mean daily range of temperature was 5·7°; at Bournemouth it was 8·6°. The mean relative humidity was 80 per cent. The mean temperature of the sea at Sandycove bathing-place was 46·5°, being 0·3° above the average for the month during the previous 7 years. The rainfall was 1·61 inches on 11 days, being 0·65 inches below the average for the month during fifteen previous years (1873-83 and 1901-04); at Bournemouth it was 0·74 inch on 11 days. The rainfall for 1905 at Kingstown amounted to 24·77 inches on 169 days, being 3·29 inches below the average for the fifteen previous years above named. During these previous fifteen years the greatest precipitation was that of 1880, amounting to 37·13 inches, and the lowest, 20·01 inches during 1904. On August 25th 3.13 inches was measured, being the greatest rainfall for 24 hours on record. The duration of bright sunshine for the month was 48·8 hours, as compared with 43·8 hours at Ordnance Survey Office, Phœnix Park, 28·1 hours at Valentia, 29·7 hours at Birr Castle, 49·3 hours at Southport, and 43·5 hours at Hastings. The total duration of bright sunshine during 1905 was 1,581·4 hours, being 168·5 hours above the average for the previous 4 years.

RAINFALL IN 1905.

* Maximum.

The rainfall was 25·277 inches, or 2·493 inches less than the average annual measurement of the thirty-five years, 1866-1900 inclusive—viz., 27·770 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches—the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell; in 1884, when the measurement was 20·467 inches; and in 1883, with its rainfall of 20·493 inches. In nine of the thirty-five years in question the rainfall was less than 26 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. In 1900 the rainfall was 34·338 inches, or 6·568 inches, in excess of the average for the thirty-five years, 1866-1900. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1900—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days. In 1904 the rainfall was 22·180 inches on 189 days.

In 1905 there were 193 rainy days, or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was 5 under the average number of rainy days, which was 198 in the thirty-five years, 1866-1900, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rainy days were only 160, and in 1870 they were only 145.

In 1905 the rainfall in 24 hours, from 9 a.m. to 9 a.m. on only one occasion exceeded one inch—namely, on August 25th—but it then amounted to 3·436 inches, the greatest daily fall registered in Dublin since these records began. On no occasion in 1893 did one inch of rain fall on a given day in Dublin. In 1894 falls of upwards of an inch of rain in 24 hours were recorded on 4 occasions—viz., May 15th (1·330 inches), July 24th (1·560 inches), August 25th (1·369 inches), and October 23rd (1·042 inches). In 1895, 1·802 inches fell on January 12th, 1·014 inches on July 24th, and 1·256 inches on July 25th. In 1896, 1·563 inches fell on July 8th, 2·020 inches on July 24th, and 1·388 inches on December 8th. In 1897, 1·166 inches fell on September 1st. In 1898, on November 23rd, 1·732 inches were measured. In 1899, the rainfall exceeded one inch on 4 occasions—viz., July 11th (1·402 inches), August 5th (2·227 inches), September 30th (1·042 inches), and December 28th (1·129 inches). In 1900, as in 1899, the rainfall exceeded one inch on 4 occasions—namely, July 27th (1·783 inches), August 2nd (2·135 inches), November 6th (1·103 inches), and November 27th (1·126 inches). In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2·037 inches. In 1902, 1·342 inches fell on July 25th, and 2·075 inches on

September 2nd. In 1903 the maximal daily rainfall was ·966 inch on September 10th. In 1904, 1·092 inches fell on May 31st, and 1·197 inches on September 12th. The excessive rainfall on Aug. 25th, 1905, is especially noteworthy—it amounted to 3·436 inches in Dublin (Fitzwilliam-square). It was the ninth occasion only since 1865—that is, in 41 years—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2·482 inches); October 27th, 1880 (2·736 inches); May 28th, 1892 (2·056 inches); July 24th, 1896 (2·020 inches); August 5th, 1899 (2·227 inches); August 2nd, 1900 (2·135 inches); November 11th, 1901 (2·037 inches); and September 2nd, 1902 (2·075 inches). On no previous occasion within the past 40 years had 3 inches or upwards been measured.

Included in the 193 rainy days in 1905 are 13 on which snow or sleet fell, and 25 on which there was hail. In January hail was observed on 2 days, in February on 3 days, in March on 9 days, in April on 4 days, in May and September on one day, in November on 3 days, and in December on 2 days. Snow or sleet fell on 3 days in January, 3 days in February, 2 days in March, 1 day in April, and four days in November. Thunder was heard once in June and twice in August. The only thunderstorm of the year occurred on August 9. Lightning was seen once in October and twice in November.

The rainfall in the first six months was 10·201 inches on 92 days. The rainfall exceeded 7 inches in August (7·019).

The rainfall was distributed quarterly as follows:—5·378 inches fell on 46 days in the first quarter, 4·823 inches on 46 days in the second, 9·065 inches on 53 days in the third, 6·011 inches on 8 days in the fourth and last quarter.

More or less fog prevailed on 44 occasions—7 in January, 2 in February, 5 in March, 1 in April, 1 in May, 2 in June, 1 in July, 0 in August, 4 in September, 6 in October, 11 in November, and 4 in December. High winds were noted on 125 days—14 in January, 10 in February, 14 in March, 15 in April, 6 in May, 4 in June, 8 in July, 8 in August, 13 in September, 7 in October, 8 in November, and 18 in December. The high winds amounted to gales (force 7 or upwards, according to the Beaufort scale) on 34 occasions—8 in January, 5 in February, 5 in March, 1 in April, 0 in May, 2 in June, 0 in July, 3 in August, 2 in September, 1 in October, 3 in November and 4 in December.

Solar halos were seen on 8 occasions, a lunar halo on 8 nights. Bright aurora was seen on the evening of November 15th.

Mr. Robert O'Brien Furlong, M.A., C.B., writes:—

The rainfall at Cloneevin, Killiney, for the year 1905 amounted to 27·68 inches, which were measured on 180 days. This was ·346 inch below the average (28·026 inches) of 20 years (1885-1904).

The number of days in which ·01 inch or upwards fell was 4 below the average (184 days) for the same period.

The greatest amount measured in any month during 1905 was 6·71 inches on 18 days in August; the smallest, ·79 inches on 10 days in September, and ·79 inch on 14 days in February.

The greatest number of days on which rain fell in any month was 22 in April—the lowest, 9, in May.

The heaviest fall in 24 hours was on August 25th, when 3·06 inches were measured. The only other day on which an inch or upwards fell was May 9th.

The rainfall of August is the highest monthly rainfall recorded here, with the exception of July, 1896, when 6·72 inches fell on 22 days.

The rainfall of August 25th (3·06 inches) is the greatest daily record—the next highest being 2·81 inches on September 2, 1902, and 2·06 inches on November 23, 1898.

There was an absolute drought from September 13th to 26th, both included.

Snow, sleet or hail was observed on 14 days.

*The Hours of Observation are 9 a.m. and 9 p.m.

† The Averages used are based on observations as follows:—Rainfall 35 years, 1866-1900; Temperature 30 years, 1871-1900; Sunshine 20 years, 1881-1900. *Wind Force*—Beaufort Scale (0-12) is used. The number of observations of Moderate and Strong winds (force 4-7), the number of observations of Calm and the number of days of Gale are given in the table.

‡ The Sunshine Values are obtained at the Mountjoy Observatory in the Phœnix Park, and the Earth Temperatures at Trinity College.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is : + ·058.

TABLE showing the Temperature of the Air in Dublin in the Twenty-one Years 1885-1905, and the Average Temperature for the Twenty Years 1885 to 1904, inclusive, as recorded by SIR JOHN W. MOORE, M.D.

NOTE.—The temperatures given above were deduced from the maximal and minimal readings of the thermometer. For the years 1885 to 1889, inclusive, Kæmtz's Formula was used, viz.:—Mean Temperature = Min. + (Max.—Min.) ·41; for subsequent years the Formula used was the following:—Mean Temperature = Min. + (Max.—Min.) C, the co-efficient C varying from month to month.

ABSTRACT OF METEOROLOGICAL DATA FOR IRELAND.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Sc.D., F.R.S.

In compiling the following Table (pp. 174–7) the stations have been grouped into two Districts, namely 1. Ireland, North ; 2. Ireland, South. Each District is represented by six stations.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are provided for in the Table. The wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking these results.

The stations selected, with the names of the Observers are shown below.

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.
IRELAND, NORTH :—

* The Hours of Observation are 9 a.m. and 9 p.m., local time, at all the Stations except Malin Head, Donaghadee, Blacksod Point, and Roche's Point, a.m., and where also Greenwich time is kept. The results under Barometer, Hygrometer, and Cloud for Malin Head, Donaghadee, Blacksod Point, and mean for the Quarters and for the Year.

† The Averages used are based on observations as follows:—Rainfall 35 years, 1866-1900; Temperature 30 years, 1871-1900; Sunshine 20 years, 1881-1900. Calms, and the number of days of Gales are given in the table.

‡ The Sunshine Values for Dublin are obtained at the Mountjoy Observatory in the Phœnix Park. The values for Earth Temperature are based

during each Quarter of the Year 1905, compiled from Tables prepared under the direction of the Meteorological Council, of the Registrar-General for Ireland.

* The Hours of Observation are 9 a.m. and 9 p.m., local time, at all the Stations except Malin Head, Donaghadee, Blacksod Point, and Roche's Point, a.m., and where also Greenwich time is kept. The results under Barometer, Hygrometer, and Cloud for Malin Head, Donaghadee, Blacksod Point, and mean for the Quarters and for the Year.

† The Averages used are based on observations as follows:—Rainfall 35 years, 1866-1900; Temperature 30 years, 1871-1900; Sunshine 20 years, 1881-1900. a.m. and the number of days of Gale are given in the table.

‡ The Sunshine Values for Dublin are obtained at the Mountjoy Observatory in the Phœnix Park, and the Earth Temperatures at Trinity College.

during each Quarter of the Year, 1905, compiled from Tables prepared under the direction of the Meteorological Council, of the Registrar-General for Ireland.

---

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 43 (*see* page 6); and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

No. 16820.

DUBLIN CASTLE,

31*st July*, 1906.

SIR,

I have to acknowledge the receipt of your letter of the 28th instant, forwarding, for submission to His Excellency the Lord Lieutenant, your Annual Report on Marriages, Births, and Deaths for the Year 1905.

I am,

Sir,

Your obedient servant,

J. B. DOUGHERTY.

The Registrar-General,
Charlemont House,
Rutland Square,
Dublin.
